

As never before, Advanced Energy has risen to its leadership role as the global source for sophisticated process control components and subsystems. At AE, leadership **inspires** our confidence, defines our direction, and **accelerates** our actions. More than that, it charges us to **increase** our value to our customers and stockholders. Leadership means we must manage smarter and see farther. **Transition faster** and work harder. And leadership means that we must challenge the status quo by introducing the industry to richer, more effective, more promising solutions.

Today, AE's products are filling a larger proportion of the key plasma processes used in the manufacture of semiconductors; compact disks, DVDs, and other digital storage media; flat-panel computer and television screens; coatings for architectural glass and optics; and automotive paint preparation. And AE products are now essential tools used in a variety of non-plasma applications as well, including industrial, medical, and consumer products. Even high-end computer workstations now incorporate AE products.

Today there is a **growing momentum** behind our market presence. We're **effecting change, driving forward,** and **increasing velocity...**

Today, AE is the force beyond power.

momentum
