

2013 Analyst Day

May 30, 2013

Safe-Harbor Statement

This presentation contains "forward-looking" statements including those regarding: the number of first and third party titles that Glu expects to publish in 2013 and 2014; forecasted smartphone and feature phone subscriptions growth; forecasted smartphone and tablet unit sales growth in comparison to projected sales growth of computers; Glu's product roadmap for the remainder of 2013; our expectation that advertising revenues will increase from current levels; our belief that Glu has the foundation in place for long-term growth; Glu's areas of focus and the actions it intends to take in its efforts to transition to becoming a games-as-a-service company; Glu's 2014 product strategy; the planned evolution of Glu's products towards primarily consumable economies, deep meta-game and monetization systems and socially/competitively driven gameplay; our belief that deeper visibility within our player acquisition channels will enable Glu to drive increasing improvement to ROI on its marketing spend; our intention to form preferred partnerships with key player acquisition channels and ad networks; our expectation that we will see revenue growth from video advertising; our intention to work directly with the top 25 advertisers and agencies on direct advertising deals; our expectation that we will roll out a test with an ad-funded loyalty program in the near future, which we expect will have a positive effect on retention while also adding incremental ad revenue; our guidance for Q2 2013 and FY 2013; and our long-term operating model. These forward-looking statements are subject to material risks and uncertainties that could cause actual results to differ materially from those in the forward-looking statements. Investors should consider important risk factors, which include: the risk that consumer demand for smartphones, tablets and next-generation platforms does not grow as significantly as we anticipate or that we will be unable to capitalize on any such growth; the risk that we do not realize a sufficient return on our investment with respect to our efforts to develop freemium games for smartphones and tablets, the risk that we do not maintain our good relationships with Apple and Google; the risk that our development expenses for games for smartphones are greater than we anticipate; the risk that our recently and newly launched games are less popular than anticipated; the risk that our newly released games will be of a quality less than desired by reviewers and consumers; the risk that the mobile games market, particularly with respect to social, freemium gaming, is smaller than anticipated; and other risks detailed under the caption "Risk Factors" in our Form 10-Q filed with the Securities and Exchange Commission on May 10, 2013 and our other SEC filings. You can locate these reports through our website at http://www.glu.com/investors.

These "forward-looking" statements are based on estimates and information available to us on May 30, 2013 and we are under no obligation, and expressly disclaim any obligation, to update or alter our forward-looking statements whether as a result of new information, future events or otherwise.

Use of Non-GAAP Financial Measures

Glu uses in this presentation certain non-GAAP measures of financial performance. The presentation of these non-GAAP financial measures is not intended to be considered in isolation from, as a substitute for, or superior to, the financial information prepared and presented in accordance with GAAP, and may be different from non-GAAP financial measures used by other companies. In addition, these non-GAAP measures have limitations in that they do not reflect all of the amounts associated with Glu's results of operations as determined in accordance with GAAP. The non-GAAP financial measures used by Glu include non-GAAP revenues, non-GAAP Smartphone revenues, non-GAAP freemium revenues, non-GAAP gross margins, non-GAAP operating expenses, non-GAAP operating margin, non-GAAP Profit/(Loss) and Adjusted EBITDA. These non-GAAP financial measures exclude the following items from Glu's unaudited consolidated statements of operations:

- · Change in deferred revenues and royalties;
- · Amortization of intangible assets;
- Stock-based compensation expense;
- · Restructuring charges;
- · Change in fair value of Blammo earnout;
- Transitional costs:
- Impairment of goodwill;
- · Release of tax liabilities: and
- Foreign currency exchange gains and losses primarily related to the revaluation of assets and liabilities.

In addition, Glu has included in this presentation "Adjusted EBITDA" figures which are used to evaluate Glu's operating performance and is defined as non-GAAP operating income/(loss) excluding depreciation.

Glu believes that these non-GAAP financial measures, when taken together with the corresponding GAAP financial measures, provide meaningful supplemental information regarding Glu's performance by excluding certain items that may not be indicative of Glu's core business, operating results or future outlook. Glu's management uses, and believes that investors benefit from referring to, these non-GAAP financial measures in assessing Glu's operating results, as well as when planning, forecasting and analyzing future periods. These non-GAAP financial measures also facilitate comparisons of Glu's performance to prior periods.

For a reconciliation of these non-GAAP financial measures to their most directly comparable GAAP financial measures, please refer to the tables attached to Glu's earnings press release for the quarter ended March 31, 2013, which is available on our website at http://www.glu.com/investors.

Q&A

Since Last Analyst Day: 2.5x Audience Size

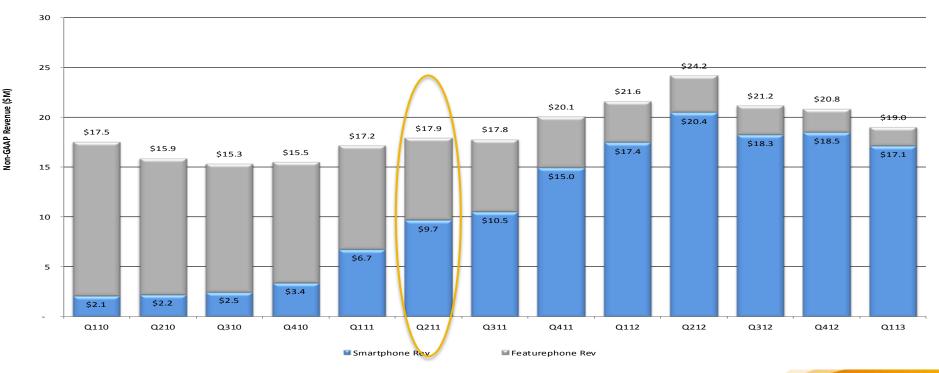

Note: MAU/DAU calculation methodology was changed in Q411 to more accurately reflect the user metrics which had the effect of increasing our Q411 MAU/DAU by less than 5% from what it would have been under our previous methodology. This change affects the comparability of Q411 and subsequent MAU/DAU data to prior quarters.

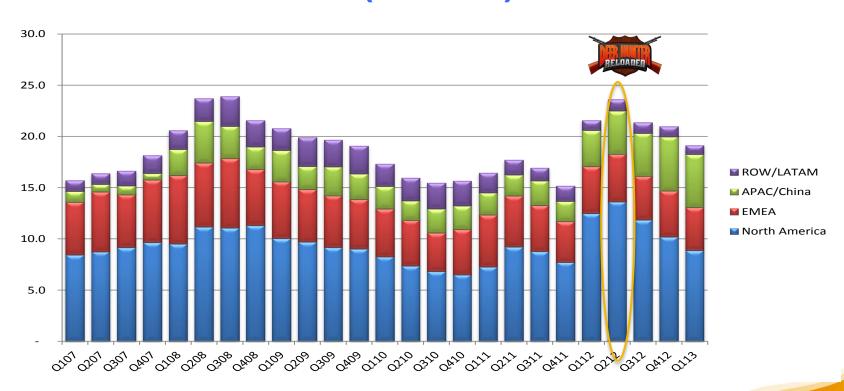

Since Last Analyst Day: Doubled Smartphone Revenue

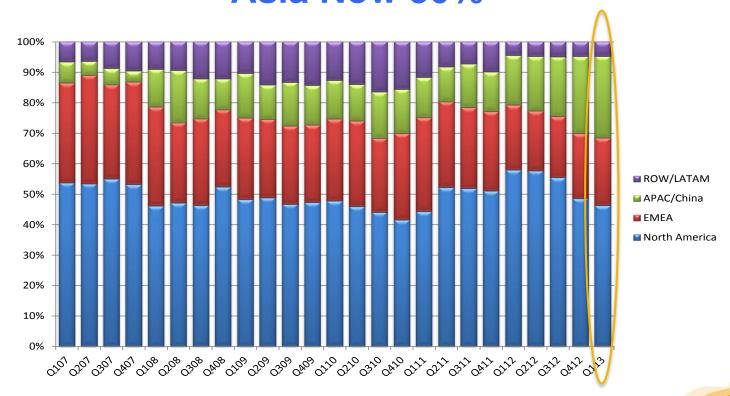

Since Last Analyst Day: Seen a (Modest) Hit

Since Last Analyst Day: Asia Now 30%

Last 6 Months: Retooling

1. World class new talent in top two layers of mgmt

2. Internal studio shift to GaaS

3. ARPDAU proof points

4. 3rd Party Publishing

Two Business Models

1st Party

- c.a. 12 launches per year
- GaaS evolution drives LTV
- Portfolio evolving
- Gung-Ho/Supercell upside
- 92% gross margin

Virtuous Circle

- Smoothing of business cycle
- Growing distribution power
- Economies of scale
- Accrete greater long term strategic value

3rd Party

- c.a. 6 in 2013
- c.a. 12 in 2014
- Reduced risk profile to 1st
 Party
- 50%+ gross margin
- Leveraging global:
 - Office presence
 - Tools & technology
 - Platform expertise

Tail Winds

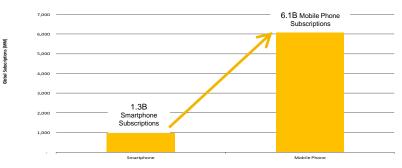

1. Continued growth of Asia

2. Next emerging markets

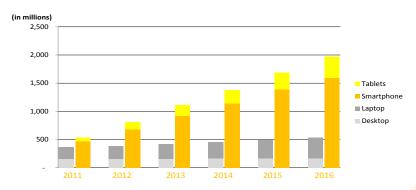

3. Tablet penetration

4. Video ad demand

Global Smartphone vs. Mobile Phone Subscriptions, Q411

'InternetTrends' Presentation at the D10 conference by Mary Meeker, Kleiner Perkins Caufield Byers; 5/30/2012

Data Source: BI Intelligence Global Smartphone Unit Sales forecast 2/29/2012; Gartner 4/10/2012

Look Out For

1. First PVE + PVP

TONSGUNS

2. First Battle Card Game

3. First 3rd party

4. First GaaS

5. Rise in advertising revenues

Seeking Inflection Points

1. Platforms

2. Real Money

Skill

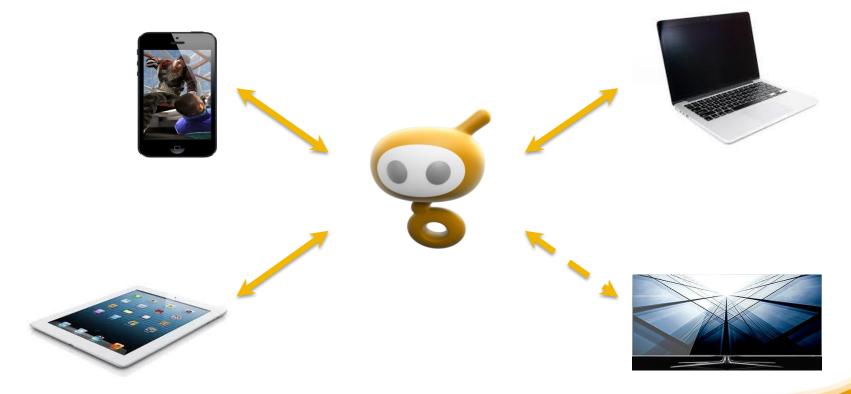

Gambling

Quad Screen Future

Set for Success

- World class talent density
- 2. 1st party core business
- 3. New 3rd party division
- 4. Underlying technology efficiency
- 5. New initiative inflection points

2013-14 Product Strategy

Making the Transition to "Games as a Service"

Overview

- Learnings from Q1
- What are "Games as a Service"?
- 3. Making the Transition
- 4. 2014 Product Strategy

Learnings from Q1

Q1 Titles

| Title | Date | Studio | Theme/Genre |
|-------------------------------|------|---------------|--------------------------|
| Dragon Storm | 2/6 | Seattle | Fantasy MMO Strategy |
| Stardom: Hollywood | 2/13 | Toronto | Pop Culture Life Sim |
| Gun Bros 2 | 2/20 | San Francisco | Sci-fi Arcade Shooter |
| Small City | 2/27 | Beijing | Casual City Sim |
| Samurai vs. Zombies Defense 2 | 3/6 | Seattle | Fantasy Tower Defense |
| Heroes of Destiny | 3/13 | Moscow | Fantasy RTS/RPG |
| Frontline Commando: DDay | 3/27 | Moscow | WW2 First-person Shooter |

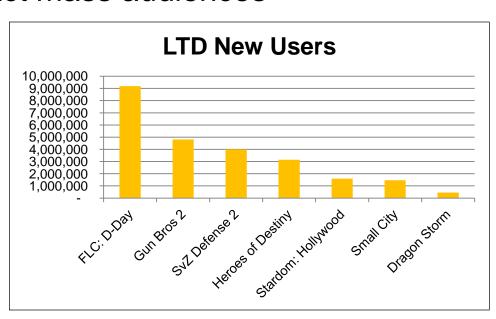

Q1 Results: Reach

Glu titles continue to attract mass audiences

- FLC: DD is one of our biggest titles ever
- → FLC:DD, GB2, SvZ2, HoD
 have all averaged 40K+ new
 users/day
- DS did not download and scale well

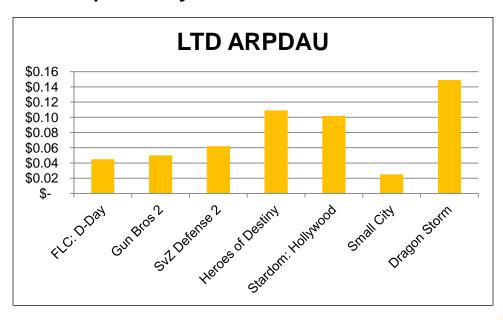

Q1 Results: ARPDAU

Record Glu ARPDAUs on a couple key titles

- DS peaked at almost\$.25 ARPDAU
- HoD doubled our typical action game ARPDAU
- SC did not monetize well

Q1 Learnings: Strengths Good at OIP, learning to build deep PvE

- Investment in HoD by new monetization team paid off
 - Proves we can move the needle on ARPDAU
 - Even without server-side tech/features

- We're still excellent at creating original IP
 - All seven titles are Glu-built franchises
 - Most have role to play in future portfolio

Q1 Learnings: Weaknesses

All titles need stronger long-term retention

- Some issues are related to single-player gameplay, e.g.:
 - Deep investment and progression
 - Well balanced game systems
 - Clear, easy-to-use interfaces

- We're making progress toward solving these issues
 - Solving rest of the long-term retention equation requires "GaaS"

What are "Games as a Service"?

My Background

Nine years working solely on Games as a Service ("GaaS")

- 5 years at EA's Pogo.com
 - Persistent investment
 - Vibrant online community
- 1 year at Zynga
 - Live operations and analysis
 - Mobile and Facebook
- 3 years at Kabam
 - Ran Kingdoms of Camelot on FB & mobile
 - Founded & built mobile business

What Defines GaaS

Five key elements set GaaS apart from 1P games

- 1. Always online, both players and operators
- Investment in a persistent "world"
- 3. Frequently updated content & events
- 4. Ongoing player interaction
- 5. E-commerce operations and analysis

Why Building GaaS is Different

Product launch is just the beginning

Running GaaS like running Amazon:

- Analyzing loads of behavioral data
- Ongoing relationship with customers
- Targeting different customers in different ways

amazon*Prime*

- ✓ FREE Two-Day Shipping on millions of items
- No minimum order size
- Unlimited instant streaming of thousands of movies and TV Shows with Prime Instant Video
- A Kindle book to borrow for free each month from the Kindle Owners' Lending Library

Join Amazon Prime for \$79/year.

Get started

Requires investment in BI, CS, PM, server tech, etc.

Why GaaS is Important to Glu

Like free-to-play, GaaS is an evolution not a fad

- Mobile gaming market has shifted in last 18 months
 - Majority of top-grossing games are always online
 - US & iOS market growth have slowed
- GaaS approach key in this climate
 - We won't be first GaaS business
 - But mobile gaming is still young
 - We can be the best

Making the Transition at Glu

Making the Transition to GaaS Four key areas of focus

- Rebalancing Organizational Structure
- Increasing Talent Density
- Sharing Central Technology
- 4. Refining Development Processes

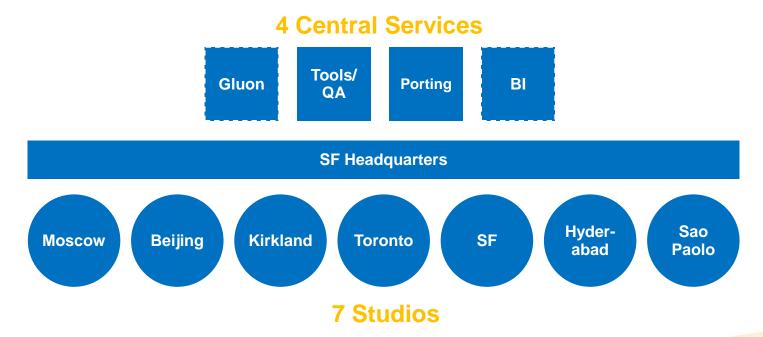

Focus, focus, focus

- Streamline unprofitable teams
- Increase focus of senior management
- Invest in central services

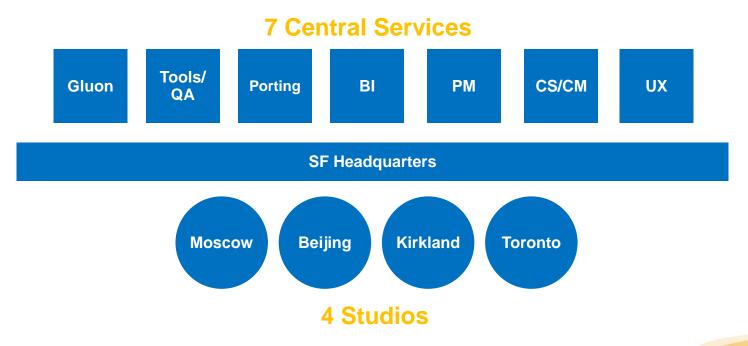

Glu Studios Q4 2012

Glu Studios Q2 2013

Strengthening the core

- By reducing our studio footprint, we go from 16 to 12 game teams
- And free up resources to strengthen central services:
 - Production & design support for offshores
 - Bl analysts
 - Live operations PMs
 - Community managers
 - User researcher
 - Engineers for central tech

Increasing Talent Density Progress so far

- Built a strong product management team, focusing on monetization
- Recruited free-to-play ("FTP") product and design talent in SF
- Established a full-service UX design function
- Hire GM with strong GaaS experience for Kirkland

Increasing Talent DensityStill to come

- 1. Increased FTP design talent across studios
 - SF HQ strong now
 - Aggressively pursuing additions in Beijing, Moscow and Kirkland
- 2. Strong server engineers
 - Server architecture is the backbone of GaaS
 - Server engineers build it and run it

Sharing Central Technology Gluon is the evolution of GST backend

- Gluon is a GaaS server platform built on GST tech
- Productized to work across all Glu games
- Offers key GaaS features like leaderboards and chat
- Rolling out with H2 games

Refining Development Processes Updated org requires updated dev approach

- Ongoing collaboration with new central services
- More early focus on monetization
- Active partnership with Gluon team
- More late focus on live game launch & operations

2014 Product Strategy

Social Gaming 2.0 (1/2)

Further broadening our reach & accessibility

| | Reach & Accessibility | | | | |
|----------------------|--|---|--------------------------|--------------------------|--|
| | Themes | Genres | Tech | Gameplay | |
| | | | | | |
| Current Portfolio | Both hardcore & casual | Arcade, sim | Thick clients | 3D | |
| | High DAU, low ARPDAU | Lots of shooters | Wifi only | "Active" mechanics | |
| | | | | | |
| Future Portfolio | More midcore focus, less casual & hardcore | Retain lead in shooters | More games under 50MB | More 2D | |
| | More focus on High ARPDAU, lower DAU | More strategy, RPG, card, resource mgmt | Wifi and 3G | More "passive" mechanics | |

Social Gaming 2.0 (2/2) Realizing the GaaS strategy in our games

| | Games as a Service | | | | |
|----------------------|---|------------------------------|--------------------------------|-----------------------------|--|
| | Economy | Social Features | Tech | Live Ops | |
| | | | | | |
| Current Portfolio | Free to play "1.0" | Some PvP | Client based | Occasional | |
| | Durable goods, paywalls | Async, friend-based social | Larger, less frequent updates | Item/IAP sales | |
| | | | | | |
| Future Portfolio | Free to play "2.0" | More PvP | Server based | Constant | |
| | Consumable goods, multiple spending paths | Real-time, in-game social | Smaller, more frequent updates | Sales, events, promos, etc. | |

Monetization Evolved

Summary

Monetization 2.0

Data Analysis Monetization Design

Tools/Tech

Economies & Meta-Game

Early Results

Higher ARPDAU

Better Conversion

Higher LTVs

Publishing Strategy

Player acquisition, ad monetization, & 3rd party publishing

Player Acquisition

Distribution Advantage

We are focused on driving improvements in three core areas:

Deep Visibility / Optimization

Optimal Glu Network Cross Promotion Effectiveness

Preferential Terms

Deep Optimization

We are now gaining deeper visibility within each channel we acquire users from.

This gives us the ability to optimize across multiple dimensions including source app, device type, OS version, user location, etc.

This deeper visibility will enable us to drive increasing improvement to ROI on our marketing spend.

Cross Promotion

- Taking advantage of our 3.9MM daily active users to drive cross promotion across our portfolio of 1st and 3rd party titles
- We have started to separately measure and manage internal cross promotion
- Leveraging our high reach, low LTV titles to drive users to our higher LTV titles

Preferential Terms

We are forming preferred partnerships with key player acquisition channels / ad networks that are in the best interest of both parties:

- Glu gains distribution leverage
- Channel partner gains larger share of Glu's player acquisition budget

Advertising Monetization

Increasing Advertising Revenue

In addition to optimizing existing channels, we are focusing on:

Video Revenue

Direct Deals With Advertisers

Implementing New Ad Models

Video

We are actively working on integrating video advertising from multiple partners, and expect to see growth from this revenue channel

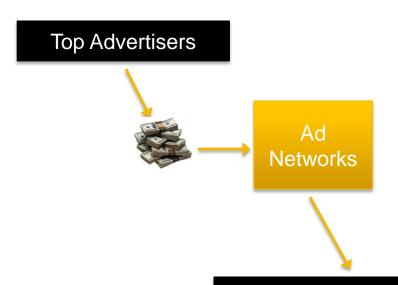

Direct Deals

Ad networks not optimal for multiple reasons:

- Take 30%+ cut (rev share + other fees)
- Large network of publishers "fighting" for the advertising dollars
- Glu gets lumped in with poor quality inventory effectively Glu is subsidizing poor quality apps
- Advertisers bid less per action due to the dilution caused by poor quality apps in each ad network

Glu competes with hundreds of publishers within each network for the advertiser's budget

Direct Deals

- We will focus on working directly with the Top 25 advertisers & agencies
- We will continue to work closely with our ad network partners, but we should be able to capture a larger piece of the pie and higher CPI/CPA bid rates by working directly with top spenders

Engagement Networks

New platforms have emerged that are effectively powering ad-funded loyalty programs

We expect to roll out a test with one of these networks in the near future. We expect this will have a positive effect on retention while also adding incremental ad revenue

International Networks

Exploring opportunities to work with local networks in key markets like Korea, China, and Japan

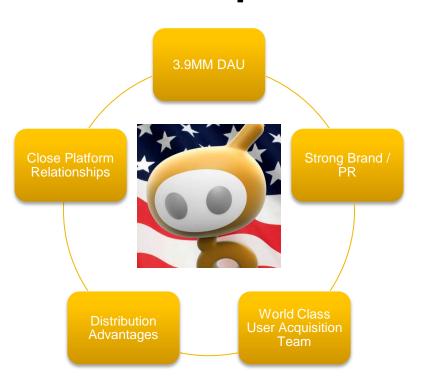

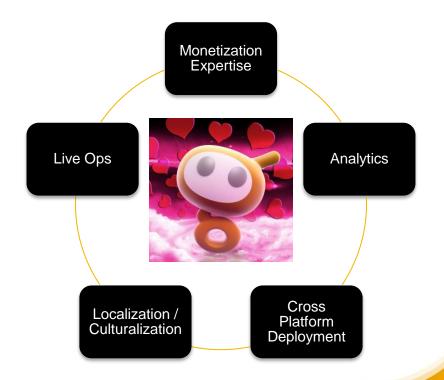

3rd Party Publishing

Glu's Unique Position

Glu's Unique Position

Progress

- Hired VP of 3rd Party Publishing and Publishing Operations team
- Signed 2 contracts and 1 binding LOI
- Pipeline progressing with strong opportunities globally
- 6 titles expected to go live by Dec '13
- Focus on high LTV titles that have proven success in other markets

Corporate Governance

April 2013 Board of Director Changes

- Matt Drapkin resigned
- Lorne Abony added as Director and Chair of Strategy Committee:
 - CEO Mood Media (TSE: MM)
 - Co-Founded FUN Technology, sold to Liberty Media
 - Prior board member of Crypto-Logic, early online gambling software vendor

June 6th Annual Stockholder Meeting Proposals

- #1: Election of Three Directors:
 - Niccolo de Masi
 - Bill Miller
 - Brooke Seawell
- #2: Amendments to the 2007 Equity Incentive Plan
 - Increase shares by 7.2 million for use over next 24 months
 - Agree to ISS fungible ratio, no re-pricing w/o stockholder approval and reduction to 6 years for maximum allowable term of options

#3: Ratification of PricewaterhouseCoopers as Independent Auditors
