

Notes to the consolidated financial statements

1. Basis of preparation

The consolidated financial statements are prepared in accordance with IFRS as issued by the IASB. The consolidated financial statements are also prepared in accordance with IFRS adopted by the European Union ('EU'), the Companies Act 2006 and Article 4 of the EU IAS Regulations.

The preparation of financial statements in conformity with IFRS requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenue and expenses during the reporting period. For a discussion on the Group's critical accounting estimates see "Critical accounting estimates" on pages 77 and 78. Actual results could differ from those estimates. The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised if the revision affects only that period or in the period of the revision and future periods if the revision affects both current and future periods.

Amounts in the consolidated financial statements are stated in pounds sterling.

Vodafone Group Plc is registered in England (No. 1833679).

2. Significant accounting policies

Accounting convention

The consolidated financial statements are prepared on a historical cost basis except for certain financial and equity instruments that have been measured at fair value.

New accounting pronouncements adopted

IFRS 3 (Revised) "Business Combinations"

The Group adopted IFRS 3 (Revised) on 1 April 2010. The revised standard introduces changes in the accounting for business combinations that impacts the amount of goodwill recognised, the reported results in the period that a business combination occurs and future reported results. The adoption of this standard is likely to have a significant impact on the Group's accounting for future business combinations.

Amendment to IAS 27 "Consolidated and Separate Financial Statements"

The Group adopted the amendment to IAS 27 on 1 April 2010. The amendment requires that when a transaction occurs with non-controlling interests in Group entities that do not result in a change in control, the difference between the consideration paid or received and the recorded non-controlling interest should be recognised in equity. In cases where control is lost, any retained interest should be remeasured to fair value with the difference between fair value and the previous carrying value being recognised immediately in the income statement. The adoption of this standard may have a significant impact on the Group's accounting for future transactions involving non-controlling interests.

The adoption of this standard has resulted in a change in presentation within the statement of cash flows of amounts paid to acquire non-controlling interests in Group entities that do not result in a change in control. In the year ended 31 March 2011 £137 million related to such transactions was classified as "Other transactions with non-controlling shareholders in subsidiaries" within "Net cash flows from financing activities", whereas these amounts would have previously been recorded in "Purchase of interests in subsidiaries and joint ventures, net of cash acquired" within "Cash flows from investing activities". There is no material impact in the comparative period.

New accounting pronouncements not yet adopted

Phase I of IFRS 9 "Financial Instruments" was issued in November 2009 and is effective for annual periods beginning on or after 1 January 2013. This standard has not yet been endorsed for use in the EU. The standard introduces changes to the classification and measurement of financial assets and the requirements relating to financial liabilities in relation to the presentation of changes in fair value due to credit risks and the removal of an exemption from measuring certain derivative liabilities at fair value. The

Group is currently assessing the impact of the standard on its results, financial position and cash flows.

The Group has not adopted the following pronouncements, which have been issued by the IASB or the IFRIC. These pronouncements have been endorsed for use in the EU, unless otherwise stated. The Group does not currently believe the adoption of these pronouncements will have a material impact on the consolidated results, financial position or cash flows of the Group.

- Amendments to IFRS 1, "Severe hyperinflation and removal of fixed dates for first-timer adopters", effective for annual periods beginning on or after 1 July 2011. This standard has not yet been endorsed for use in the EU.
- Amendments to IFRS 7, "Financial Instruments: Disclosure", effective for annual periods beginning on or after 1 July 2011. This standard has not yet been endorsed for use in the EU.
- "Improvements to IFRSs", effective over a range of dates, with the earliest being for annual periods beginning on or after 1 January 2011.
- Amendment to IFRS 1, "Limited Exemption from Comparative IFRS 7 disclosures for first time adopters", effective for annual periods beginning on or after 1 July 2010.
- Amendment to IAS 12, "Deferred tax: Recovery of Underlying Assets", effective for annual periods beginning on or after 1 January 2012. This standard has not yet been endorsed for use in the EU.
- Amendment to IAS 24, "Related Party Disclosures – State-controlled Entities and the Definition of a Related Party", effective for annual periods beginning on or after 1 January 2011.
- Amendment to IFRIC 14, "Prepayments on a Minimum Funding Requirement", effective for annual periods beginning on or after 1 January 2011.
- IFRIC 19, "Extinguishing Financial Liabilities with Equity Instruments", effective annual periods beginning on or after 1 July 2010 with early adoption permitted.

The Group has also not adopted the following pronouncements, all of which were issued by the IASB on 12 May 2011 and which are effective for annual periods beginning on or after 1 January 2013. These pronouncements have not yet been endorsed for use in the EU. The Group has not completed its assessment of the impact of these pronouncements on the consolidated results, financial position or cash flows of the Group. However, the Group currently expects that IFRS 11, "Joint Arrangements", will have a material impact on the presentation of the Group's interests in its joint ventures owing to the Group's significant investments in joint ventures as discussed in note 13.

- IFRS 10, 'Consolidated Financial Statements', which replaces parts of IAS 27, 'Consolidated and Separate Financial Statements' and all of SIC-12, 'Consolidation – Special Purpose Entities', builds on existing principles by identifying the concept of control as the determining factor in whether an entity should be included within the consolidated financial statements of the parent company. The remainder of IAS 27, 'Separate Financial Statements', now contains accounting and disclosure requirements for investments in subsidiaries, joint ventures and associates only when an entity prepares separate financial statements and is therefore not applicable in the Group's consolidated financial statements.
- IFRS 11, 'Joint Arrangements', which replaces IAS 31, 'Interests in Joint Ventures' and SIC-13, 'Jointly Controlled Entities – Non-monetary Contributions by Venturers', requires a single method, known as the equity method, to account for interests in jointly controlled entities which is consistent with the accounting treatment currently applied to investments in associates. The proportionate consolidation method currently applied to the Group's interests in joint ventures is prohibited. IAS 28, 'Investments in Associates and Joint Ventures', was amended as a consequence of the issuance of IFRS 11. In addition to prescribing the accounting for investment in associates, it now sets out the requirements for the application of the equity method when accounting for joint ventures. The application of the equity method has not changed as a result of this amendment.
- IFRS 12, 'Disclosure of Interest in Other Entities', is a new and comprehensive standard on disclosure requirements for all forms of interests in other entities, including joint arrangements, associates, special purpose vehicles and other off balance sheet vehicles. The

standard includes disclosure requirements for entities covered under IFRS 10 and IFRS 11.

- IFRS 13, 'Fair Value Measurement', provides guidance on how fair value should be applied where its use is already required or permitted by other standards within IFRS, including a precise definition of fair value and a single source of fair value measurement and disclosure requirements for use across IFRS.

Basis of consolidation

The consolidated financial statements incorporate the financial statements of the Company and entities controlled, both unilaterally and jointly, by the Company.

Accounting for subsidiaries

A subsidiary is an entity controlled by the Company. Control is achieved where the Company has the power to govern the financial and operating policies of an entity so as to obtain benefits from its activities.

The results of subsidiaries acquired or disposed of during the year are included in the income statement from the effective date of acquisition or up to the effective date of disposal, as appropriate. Where necessary, adjustments are made to the financial statements of subsidiaries to bring their accounting policies into line with those used by the Group.

All intra-group transactions, balances, income and expenses are eliminated on consolidation.

Non-controlling interests in the net assets of consolidated subsidiaries are identified separately from the Group's equity therein. Non-controlling interests consist of the amount of those interests at the date of the original business combination and the non-controlling shareholder's share of changes in equity since the date of the combination. Total comprehensive income is attributed to non-controlling interests even if this results in the non-controlling interests having a deficit balance.

Business combinations

Acquisitions of subsidiaries are accounted for using the acquisition method. The cost of the acquisition is measured at the aggregate of the fair values, at the date of exchange, of assets given, liabilities incurred or assumed, and equity instruments issued by the Group in exchange for control of the acquiree. Acquisition-related costs are recognised in the income statement as incurred. The acquiree's identifiable assets and liabilities are recognised at their fair values at the acquisition date.

Goodwill is measured as the excess of the sum of the consideration transferred, the amount of any non-controlling interests in the acquiree and the fair value of the Group's previously held equity interest in the acquiree, if any, over the net amounts of identifiable assets acquired and liabilities assumed at the acquisition date.

The interest of the non-controlling shareholders in the acquiree may initially be measured either at fair value or at the non-controlling shareholders' proportion of the net fair value of the identifiable assets acquired, liabilities and contingent liabilities assumed. The choice of measurement basis is made on an acquisition-by-acquisition basis.

Acquisition of interests from non-controlling shareholders

In transactions with non-controlling parties that do not result in a change in control, the difference between the fair value of the consideration paid or received and the amount by which the non-controlling interest is adjusted is recognised in equity.

Interests in joint ventures

A joint venture is a contractual arrangement whereby the Group and other parties undertake an economic activity that is subject to joint control; that is, when the strategic financial and operating policy decisions relating to the activities require the unanimous consent of the parties sharing control.

The Group reports its interests in jointly controlled entities using proportionate consolidation. The Group's share of the assets, liabilities,

income, expenses and cash flows of jointly controlled entities are combined with the equivalent items in the results on a line-by-line basis.

Any goodwill arising on the acquisition of the Group's interest in a jointly controlled entity is accounted for in accordance with the Group's accounting policy for goodwill arising on the acquisition of a subsidiary.

Investments in associates

An associate is an entity over which the Group has significant influence and that is neither a subsidiary nor an interest in a joint venture. Significant influence is the power to participate in the financial and operating policy decisions of the investee but is not control or joint control over those policies.

The results and assets and liabilities of associates are incorporated in the consolidated financial statements using the equity method of accounting. Under the equity method, investments in associates are carried in the consolidated statement of financial position at cost as adjusted for post-acquisition changes in the Group's share of the net assets of the associate, less any impairment in the value of the investment. Losses of an associate in excess of the Group's interest in that associate are not recognised. Additional losses are provided for, and a liability is recognised, only to the extent that the Group has incurred legal or constructive obligations or made payments on behalf of the associate.

Any excess of the cost of acquisition over the Group's share of the net fair value of the identifiable assets, liabilities and contingent liabilities of the associate recognised at the date of acquisition is recognised as goodwill. The goodwill is included within the carrying amount of the investment.

The licences of the Group's associate in the US, Verizon Wireless, are indefinite lived assets as they are subject to perfunctory renewal. Accordingly, they are not subject to amortisation but are tested annually for impairment, or when indicators exist that the carrying value is not recoverable.

Intangible assets

Identifiable intangible assets are recognised when the Group controls the asset, it is probable that future economic benefits attributed to the asset will flow to the Group and the cost of the asset can be reliably measured.

Goodwill

Goodwill arising on the acquisition of an entity represents the excess of the cost of acquisition over the Group's interest in the net fair value of the identifiable assets, liabilities and contingent liabilities of the entity recognised at the date of acquisition.

Goodwill is initially recognised as an asset at cost and is subsequently measured at cost less any accumulated impairment losses. Goodwill is held in the currency of the acquired entity and revalued to the closing rate at each reporting period date.

Goodwill is not subject to amortisation but is tested for impairment.

Negative goodwill arising on an acquisition is recognised directly in the income statement.

On disposal of a subsidiary or a jointly controlled entity, the attributable amount of goodwill is included in the determination of the profit or loss recognised in the income statement on disposal.

Goodwill arising before the date of transition to IFRS, on 1 April 2004, has been retained at the previous UK GAAP amounts, subject to being tested for impairment at that date. Goodwill written off to reserves under UK GAAP prior to 1998 has not been reinstated and is not included in determining any subsequent profit or loss on disposal.

Finite lived intangible assets

Intangible assets with finite lives are stated at acquisition or development cost, less accumulated amortisation. The amortisation period and method is reviewed at least annually. Changes in the expected useful life or the expected pattern of consumption of future economic benefits embodied in the asset is accounted for by changing the amortisation period or method,

Notes to the consolidated financial statements continued

2. Significant accounting policies continued

as appropriate, and are treated as changes in accounting estimates. The amortisation expense on intangible assets with finite lives is recognised in profit or loss in the expense category consistent with the function of the intangible asset.

Licence and spectrum fees

Amortisation periods for licence and spectrum fees are determined primarily by reference to the unexpired licence period, the conditions for licence renewal and whether licences are dependent on specific technologies. Amortisation is charged to the income statement on a straight-line basis over the estimated useful lives from the commencement of service of the network.

Computer software

Computer software comprises computer software purchased from third parties as well as the cost of internally developed software. Computer software licences are capitalised on the basis of the costs incurred to acquire and bring into use the specific software. Costs that are directly associated with the production of identifiable and unique software products controlled by the Group, and are probable of producing future economic benefits are recognised as intangible assets. Direct costs include software development employee costs and directly attributable overheads.

Software integral to a related item of hardware equipment is accounted for as property, plant and equipment.

Costs associated with maintaining computer software programs are recognised as an expense when they are incurred.

Internally developed software is recognised only if all of the following conditions are met:

- an asset is created that can be separately identified;
- it is probable that the asset created will generate future economic benefits; and
- the development cost of the asset can be measured reliably.

Amortisation is charged to the income statement on a straight-line basis over the estimated useful lives from the date the software is available for use.

Other intangible assets

Other intangible assets, including brands and customer bases, are recorded at fair value at the date of acquisition. Amortisation is charged to the income statement on either a straight-line or sum of digits basis over the estimated useful lives of intangible assets from the date they are available for use.

Estimated useful lives

The estimated useful lives of finite lived intangible assets are as follows:

| | |
|-----------------------------|--------------|
| ■ Licence and spectrum fees | 3 – 25 years |
| ■ Computer software | 3 – 5 years |
| ■ Brands | 1 – 10 years |
| ■ Customer bases | 2 – 7 years |

Property, plant and equipment

Land and buildings held for use are stated in the statement of financial position at their cost, less any subsequent accumulated depreciation and subsequent accumulated impairment losses.

Equipment, fixtures and fittings are stated at cost less accumulated depreciation and any accumulated impairment losses.

Assets in the course of construction are carried at cost, less any recognised impairment loss. Depreciation of these assets commences when the assets are ready for their intended use.

The cost of property, plant and equipment includes directly attributable incremental costs incurred in their acquisition and installation.

Depreciation is charged so as to write off the cost of assets, other than land and properties under construction, using the straight-line method, over their estimated useful lives, as follows:

| | |
|----------------------|-----------------------|
| ■ Freehold buildings | 25 – 50 years |
| ■ Leasehold premises | the term of the lease |

Equipment, fixtures and fittings:

| | |
|--------------------------|--------------|
| ■ Network infrastructure | 3 – 25 years |
| ■ Other | 3 – 10 years |

Depreciation is not provided on freehold land.

Assets held under finance leases are depreciated over their expected useful lives on the same basis as owned assets or, where shorter, the term of the relevant lease.

The gain or loss arising on the disposal or retirement of an item of property, plant and equipment is determined as the difference between the sale proceeds and the carrying amount of the asset and is recognised in the income statement.

Impairment of assets

Goodwill

Goodwill is not subject to amortisation but is tested for impairment annually or whenever there is an indication that the asset may be impaired.

For the purpose of impairment testing, assets are grouped at the lowest levels for which there are separately identifiable cash flows, known as cash-generating units. If the recoverable amount of the cash-generating unit is less than the carrying amount of the unit, the impairment loss is allocated first to reduce the carrying amount of any goodwill allocated to the unit and then to the other assets of the unit pro-rata on the basis of the carrying amount of each asset in the unit. Impairment losses recognised for goodwill are not reversed in a subsequent period.

Recoverable amount is the higher of fair value less costs to sell and value in use. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset for which the estimates of future cash flows have not been adjusted.

The Group prepares and approves formal five year management plans for its operations, which are used in the value in use calculations. In certain developing markets the fifth year of the management plan is not indicative of the long term future performance as operations may not have reached maturity. For these operations, the Group extends the plan data for an additional five year period.

Property, plant and equipment and finite lived intangible assets

At each reporting period date, the Group reviews the carrying amounts of its property, plant and equipment and finite lived intangible assets to determine whether there is any indication that those assets have suffered an impairment loss. If any such indication exists, the recoverable amount of the asset is estimated in order to determine the extent, if any, of the impairment loss. Where it is not possible to estimate the recoverable amount of an individual asset, the Group estimates the recoverable amount of the cash-generating unit to which the asset belongs.

If the recoverable amount of an asset or cash-generating unit is estimated to be less than its carrying amount, the carrying amount of the asset or cash-generating unit is reduced to its recoverable amount. An impairment loss is recognised immediately in the income statement.

Where an impairment loss subsequently reverses, the carrying amount of the asset or cash-generating unit is increased to the revised estimate of its recoverable amount, not to exceed the carrying amount that would have been determined had no impairment loss been recognised for the asset or cash-generating unit in prior years. A reversal of an impairment loss is recognised immediately in the income statement.

Revenue

Revenue is recognised to the extent the Group has delivered goods or rendered services under an agreement, the amount of revenue can be measured reliably and it is probable that the economic benefits associated with the transaction will flow to the Group. Revenue is measured at the fair value of the consideration received, exclusive of sales taxes and discounts.

The Group principally obtains revenue from providing the following telecommunication services: access charges, airtime usage, messaging, interconnect fees, data services and information provision, connection fees and equipment sales. Products and services may be sold separately or in bundled packages.

Revenue for access charges, airtime usage and messaging by contract customers is recognised as services are performed, with unbilled revenue resulting from services already provided accrued at the end of each period and unearned revenue from services to be provided in future periods deferred. Revenue from the sale of prepaid credit is deferred until such time as the customer uses the airtime, or the credit expires.

Revenue from interconnect fees is recognised at the time the services are performed.

Revenue from data services and information provision is recognised when the Group has performed the related service and, depending on the nature of the service, is recognised either at the gross amount billed to the customer or the amount receivable by the Group as commission for facilitating the service.

Customer connection revenue is recognised together with the related equipment revenue to the extent that the aggregate equipment and connection revenue does not exceed the fair value of the equipment delivered to the customer. Any customer connection revenue not recognised together with related equipment revenue is deferred and recognised over the period in which services are expected to be provided to the customer.

Revenue for device sales is recognised when the device is delivered to the end customer and the sale is considered complete. For device sales made to intermediaries, revenue is recognised if the significant risks associated with the device are transferred to the intermediary and the intermediary has no general right of return. If the significant risks are not transferred, revenue recognition is deferred until sale of the device to an end customer by the intermediary or the expiry of the right of return.

In revenue arrangements including more than one deliverable, the arrangements are divided into separate units of accounting. Deliverables are considered separate units of accounting if the following two conditions are met: (1) the deliverable has value to the customer on a stand-alone basis and (2) there is evidence of the fair value of the item. The arrangement consideration is allocated to each separate unit of accounting based on its relative fair value.

Commissions

Intermediaries are given cash incentives by the Group to connect new customers and upgrade existing customers.

For intermediaries who do not purchase products and services from the Group, such cash incentives are accounted for as an expense. Such cash incentives to other intermediaries are also accounted for as an expense if:

- the Group receives an identifiable benefit in exchange for the cash incentive that is separable from sales transactions to that intermediary; and
- the Group can reliably estimate the fair value of that benefit.

Cash incentives that do not meet these criteria are recognised as a reduction of the related revenue.

Inventory

Inventory is stated at the lower of cost and net realisable value. Cost is determined on the basis of weighted average costs and comprises direct materials and, where applicable, direct labour costs and those overheads that have been incurred in bringing the inventories to their present location and condition.

Leasing

Leases are classified as finance leases whenever the terms of the lease transfer substantially all the risks and rewards of ownership of the asset to the lessee. All other leases are classified as operating leases.

Assets held under finance leases are recognised as assets of the Group at their fair value at the inception of the lease or, if lower, at the present value of the minimum lease payments as determined at the inception of the lease. The corresponding liability to the lessor is included in the statement of financial position as a finance lease obligation. Lease payments are apportioned between finance charges and reduction of the lease obligation so as to achieve a constant rate of interest on the remaining balance of the liability. Finance charges are recognised in the income statement.

Rentals payable under operating leases are charged to the income statement on a straight-line basis over the term of the relevant lease. Benefits received and receivable as an incentive to enter into an operating lease are also spread on a straight-line basis over the lease term.

Foreign currencies

The consolidated financial statements are presented in sterling, which is the parent company's functional and presentation currency. Each entity in the Group determines its own functional currency and items included in the financial statements of each entity are measured using that functional currency.

Transactions in foreign currencies are initially recorded at the functional currency rate prevailing at the date of the transaction. Monetary assets and liabilities denominated in foreign currencies are retranslated into the respective functional currency of the entity at the rates prevailing on the reporting period date. Non-monetary items carried at fair value that are denominated in foreign currencies are retranslated at the rates prevailing on the initial transaction dates. Non-monetary items measured in terms of historical cost in a foreign currency are not retranslated.

Changes in the fair value of monetary securities denominated in foreign currency classified as available-for-sale are analysed between translation differences and other changes in the carrying amount of the security. Translation differences are recognised in the income statement and other changes in carrying amount are recognised in equity.

Translation differences on non-monetary financial assets, such as investments in equity securities, classified as available-for-sale are reported as part of the fair value gain or loss and are included in equity.

For the purpose of presenting consolidated financial statements, the assets and liabilities of entities with a functional currency other than sterling are expressed in sterling using exchange rates prevailing at the reporting period date. Income and expense items and cash flows are translated at the average exchange rates for the period and exchange differences arising are recognised directly in equity. On disposal of a foreign entity, the cumulative amount previously recognised in equity relating to that particular foreign operation is recognised in profit or loss.

Goodwill and fair value adjustments arising on the acquisition of a foreign operation are treated as assets and liabilities of the foreign operation and translated accordingly.

In respect of all foreign operations, any exchange differences that have arisen before 1 April 2004, the date of transition to IFRS, are deemed to be nil and will be excluded from the determination of any subsequent profit or loss on disposal.

Notes to the consolidated financial statements continued

2. Significant accounting policies continued

The net foreign exchange gain recognised in the consolidated income statement is £1,022 million (2010: £35 million gain, 2009: £131 million loss).

Research expenditure

Expenditure on research activities is recognised as an expense in the period in which it is incurred.

Post employment benefits

For defined benefit retirement plans, the difference between the fair value of the plan assets and the present value of the plan liabilities is recognised as an asset or liability on the statement of financial position. Scheme liabilities are assessed using the projected unit funding method and applying the principal actuarial assumptions at the reporting period date. Assets are valued at market value.

Actuarial gains and losses are taken to the statement of comprehensive income as incurred. For this purpose, actuarial gains and losses comprise both the effects of changes in actuarial assumptions and experience adjustments arising because of differences between the previous actuarial assumptions and what has actually occurred.

Other movements in the net surplus or deficit are recognised in the income statement, including the current service cost, any past service cost and the effect of any curtailment or settlements. The interest cost less the expected return on assets is also charged to the income statement. The amount charged to the income statement in respect of these plans is included within operating costs or in the Group's share of the results of equity accounted operations as appropriate.

The Group's contributions to defined contribution pension plans are charged to the income statement as they fall due.

Cumulative actuarial gains and losses at 1 April 2004, the date of transition to IFRS, have been recognised in the statement of financial position.

Taxation

Income tax expense represents the sum of the current tax payable and deferred tax.

Current tax payable or recoverable is based on taxable profit for the year. Taxable profit differs from profit as reported in the income statement because some items of income or expense are taxable or deductible in different years or may never be taxable or deductible. The Group's liability for current tax is calculated using UK and foreign tax rates and laws that have been enacted or substantively enacted by the reporting period date.

Deferred tax is the tax expected to be payable or recoverable in the future arising from temporary differences between the carrying amounts of assets and liabilities in the financial statements and the corresponding tax bases used in the computation of taxable profit. It is accounted for using the statement of financial position liability method. Deferred tax liabilities are generally recognised for all taxable temporary differences and deferred tax assets are recognised to the extent that it is probable that taxable profits will be available against which deductible temporary differences can be utilised.

Such assets and liabilities are not recognised if the temporary difference arises from the initial recognition (other than in a business combination) of assets and liabilities in a transaction that affects neither the taxable profit nor the accounting profit. Deferred tax liabilities are not recognised to the extent they arise from the initial recognition of non tax deductible goodwill.

Deferred tax liabilities are recognised for taxable temporary differences arising on investments in subsidiaries and associates, and interests in joint ventures, except where the Group is able to control the reversal of the temporary difference and it is probable that the temporary difference will not reverse in the foreseeable future.

The carrying amount of deferred tax assets is reviewed at each reporting period date and adjusted to reflect changes in probability that sufficient taxable profits will be available to allow all or part of the asset to be recovered.

Deferred tax is calculated at the tax rates that are expected to apply in the period when the liability is settled or the asset realised, based on tax rates that have been enacted or substantively enacted by the reporting period date.

Tax assets and liabilities are offset when there is a legally enforceable right to set off current tax assets against current tax liabilities and when they either relate to income taxes levied by the same taxation authority on either the same taxable entity or on different taxable entities which intend to settle the current tax assets and liabilities on a net basis.

Tax is charged or credited to the income statement, except when it relates to items charged or credited directly to equity, in which case the tax is also recognised directly in equity.

Financial instruments

Financial assets and financial liabilities, in respect of financial instruments, are recognised on the Group's statement of financial position when the Group becomes a party to the contractual provisions of the instrument.

Trade receivables

Trade receivables do not carry any interest and are stated at their nominal value as reduced by appropriate allowances for estimated irrecoverable amounts. Estimated irrecoverable amounts are based on the ageing of the receivable balances and historical experience. Individual trade receivables are written off when management deems them not to be collectible.

Other investments

Other investments are recognised and derecognised on a trade date where a purchase or sale of an investment is under a contract whose terms require delivery of the investment within the timeframe established by the market concerned, and are initially measured at cost, including transaction costs.

Other investments classified as held for trading and available-for-sale are stated at fair value. Where securities are held for trading purposes, gains and losses arising from changes in fair value are included in net profit or loss for the period. For available-for-sale investments, gains and losses arising from changes in fair value are recognised directly in equity, until the security is disposed of or is determined to be impaired, at which time the cumulative gain or loss previously recognised in equity, determined using the weighted average cost method, is included in the net profit or loss for the period.

Other investments classified as loans and receivables are stated at amortised cost using the effective interest method, less any impairment.

Cash and cash equivalents

Cash and cash equivalents comprise cash on hand and call deposits, and other short-term highly liquid investments that are readily convertible to a known amount of cash and are subject to an insignificant risk of changes in value.

Trade payables

Trade payables are not interest bearing and are stated at their nominal value.

Financial liabilities and equity instruments

Financial liabilities and equity instruments issued by the Group are classified according to the substance of the contractual arrangements entered into and the definitions of a financial liability and an equity instrument. An equity instrument is any contract that evidences a residual interest in the assets of the Group after deducting all of its liabilities and includes no obligation to deliver cash or other financial assets. The accounting policies adopted for specific financial liabilities and equity instruments are set out below.

Capital market and bank borrowings

Interest bearing loans and overdrafts are initially measured at fair value (which is equal to cost at inception), and are subsequently measured at amortised cost, using the effective interest rate method, except where they are identified as a hedged item in a fair value hedge. Any difference between the proceeds net of transaction costs and the amount due on settlement or redemption of borrowings is recognised over the term of the borrowing.

Equity instruments

Equity instruments issued by the Group are recorded at the proceeds received, net of direct issuance costs.

Derivative financial instruments and hedge accounting

The Group's activities expose it to the financial risks of changes in foreign exchange rates and interest rates.

The use of financial derivatives is governed by the Group's policies approved by the Board of directors, which provide written principles on the use of financial derivatives consistent with the Group's risk management strategy. Changes in values of all derivatives of a financing nature are included within investment income and financing costs in the income statement. The Group does not use derivative financial instruments for speculative purposes.

Derivative financial instruments are initially measured at fair value on the contract date and are subsequently remeasured to fair value at each reporting date. The Group designates certain derivatives as either:

- hedges of the change of fair value of recognised assets and liabilities ('fair value hedges'); or
- hedges of net investments in foreign operations.

Hedge accounting is discontinued when the hedging instrument expires or is sold, terminated, or exercised, or no longer qualifies for hedge accounting, or the Company chooses to end the hedging relationship.

Fair value hedges

The Group's policy is to use derivative instruments (primarily interest rate swaps) to convert a proportion of its fixed rate debt to floating rates in order to hedge the interest rate risk arising, principally, from capital market borrowings. The Group designates these as fair value hedges of interest rate risk with changes in fair value of the hedging instrument recognised in the income statement for the period together with the changes in the fair value of the hedged item due to the hedged risk, to the extent the hedge is effective. The ineffective portion is recognised immediately in the income statement.

Net investment hedges

Exchange differences arising from the translation of the net investment in foreign operations are recognised directly in equity. Gains and losses on those hedging instruments (which include bonds, commercial paper and foreign exchange contracts) designated as hedges of the net investments in foreign operations are recognised in equity to the extent that the hedging relationship is effective. These amounts are included in exchange differences on translation of foreign operations as stated in the statement of comprehensive income. Gains and losses relating to hedge ineffectiveness are recognised immediately in the income statement for the period. Gains and losses accumulated in the translation reserve are included in the income statement when the foreign operation is disposed of.

Put option arrangements

The potential cash payments related to put options issued by the Group over the equity of subsidiary companies are accounted for as financial liabilities when such options may only be settled other than by exchange of a fixed amount of cash or another financial asset for a fixed number of shares in the subsidiary.

The amount that may become payable under the option on exercise is initially recognised at fair value within borrowings with a corresponding charge directly to equity. The charge to equity is recognised separately as written put options over non-controlling interests, adjacent to non-controlling interests in the net assets of consolidated subsidiaries.

The Group recognises the cost of writing such put options, determined as the excess of the fair value of the option over any consideration received, as a financing cost.

Such options are subsequently measured at amortised cost, using the effective interest rate method, in order to accrete the liability up to the amount payable under the option at the date at which it first becomes exercisable. The charge arising is recorded as a financing cost. In the event that the option expires unexercised, the liability is derecognised with a corresponding adjustment to equity.

Provisions

Provisions are recognised when the Group has a present obligation (legal or constructive) as a result of a past event, it is probable that the Group will be required to settle that obligation and a reliable estimate can be made of the amount of the obligation. Provisions are measured at the directors' best estimate of the expenditure required to settle the obligation at the reporting date and are discounted to present value where the effect is material.

Share-based payments

The Group issues equity-settled share-based payments to certain employees. Equity-settled share-based payments are measured at fair value (excluding the effect of non market-based vesting conditions) at the date of grant. The fair value determined at the grant date of the equity-settled share-based payments is expensed on a straight-line basis over the vesting period, based on the Group's estimate of the shares that will eventually vest and adjusted for the effect of non market-based vesting conditions.

Fair value is measured using a binomial pricing model, being a lattice-based option valuation model, which is calibrated using a Black-Scholes framework. The expected life used in the model has been adjusted, based on management's best estimate, for the effects of non-transferability, exercise restrictions and behavioural considerations.

The Group uses historical data to estimate option exercise and employee termination within the valuation model; separate groups of employees that have similar historical exercise behaviour are considered separately for valuation purposes. The expected life of options granted is derived from the output of the option valuation model and represents the period of time that options are expected to be outstanding. Expected volatilities are based on implied volatilities as determined by a simple average of no less than three international banks, excluding the highest and lowest numbers. The risk-free rates for periods within the contractual life of the option are based on the UK gilt yield curve in effect at the time of grant.

Some share awards have an attached market condition, based on total shareholder return ('TSR'), which is taken into account when calculating the fair value of the share awards. The valuation for the TSR is based on Vodafone's ranking within the same group of companies, where possible, over the past five years. The volatility of the ranking over a three year period is used to determine the probable weighted percentage number of shares that could be expected to vest and hence affect fair value.

The fair value of awards of non-vested shares is equal to the closing price of the Vodafone's shares on the date of grant, adjusted for the present value of future dividend entitlements where appropriate.
