

# Pace to launch new range of ADSL and VDSL gateways at Broadband World Forum 2014

20 October 2014

Pace plc, a global leader for digital TV and broadband technologies, today announced the launch of their new range of ADSL and VDSL gateways:

- Entry-level: The [GA2305](#) is an ADSL2+ gateway targeted for high-speed Internet and IPTV services with wireless N and four fast Ethernet interfaces to enable whole home connectivity.
- Mid-level: The [GA4305](#) adds voice services with the [GV4305](#) further adding VDSL2 to the entry level product to enable the triple play bundle and provide access network independence.
- High-end: The [GV5707](#) is Pace's top of the range model with full gigabit Ethernet, dedicated VDSL2 and Ethernet WAN ports, high power dual-band concurrent 802.11ac and optional HPNA networking.

Pace has continued to build on over a decade of gateway software experience and all of the new gateways come pre-installed with [Pace's Helium software](#). Helium is a feature rich gateway stack that has an intuitive web user interface for user configuration; it delivers high security and WAN routing out of the box; and includes media, file and printer sharing using DLNA and Samba. Helium additionally supports home energy, monitoring and automation applications with OSGi enabling operators to develop interoperable smarthome applications.

Furthermore, Helium is pre-integrated and fully instrumented with the industry standards for remote management including TR-069, XMPP and SNMPv3, enabling operators using [Pace's ECO service management](#) tools or other management systems to improve their customer support capabilities, reduce their operational expenses and shorten their time to market for new features.

"Pace now offers a complete range of xDSL products that combine the right feature set, functionality and associated economics to serve our customers growing demand for advanced broadband services" stated Jim Henderson, President, Pace International. "Pace's pedigree in innovative, highly reliable hardware, combined with its vast experience in advanced gateway software and device management give operators the foundation to deliver a high performance experience with an unsurpassed quality of service in a home environment that is rapidly increasing in complexity".

Pace will demonstrate their full range of xDSL, Cable and Fibre gateways and network extenders on booth #F30 at Broadband World Forum, which takes place at the RAI, Amsterdam, from 21-23 October 2014.

## About Pace

Pace (LSE: PIC) is a leading provider of technology solutions to the PayTV and Broadband industries. With a broad portfolio of customer premise equipment, network solutions, and software and services,

Pace empowers service providers to simply and cost-effectively innovate at the speed they want, to define the evolution of their networks, and all in the way they want for their subscribers. Pace has built up its experience and expertise over 30 years and this is recognized by a customer base of over 200 operators around the globe.

Headquartered in the UK, Pace operates in markets across the world, and employs around 2300 people in locations that also include the USA, France, India, and China. For further information, visit:
