Goldman Sachs Sixth Annual
Asia Technology Symposium 2002

Michael Hara
Vice President of Investor Relations

Safe Harbor Statement

During the course of this presentation we may make forward looking statements based on current expectations. Forward-looking statements pertain to future events and are subject to risks and uncertainties. The Company's actual results may differ materially from results discussed in any forward-looking statements. For a complete discussion of risk factors that could affect the Company's present and future financial results please refer to the Company's Form 10K and Annual Report for the fiscal year ended January 27, 2002 and quarterly reports on Form 10-Q filed with the Securities and Exchange Commission.

World Leader in 3D Graphics & Visual Computing

1000 polygons/frame

4th Generation – Programmable Shaders

GeForce3
Spring 2001

55M transistors
40M polys/sec

Chameleon

1280x1024 AA @ 60fps
300K polygons/frame
150 operations/pixel

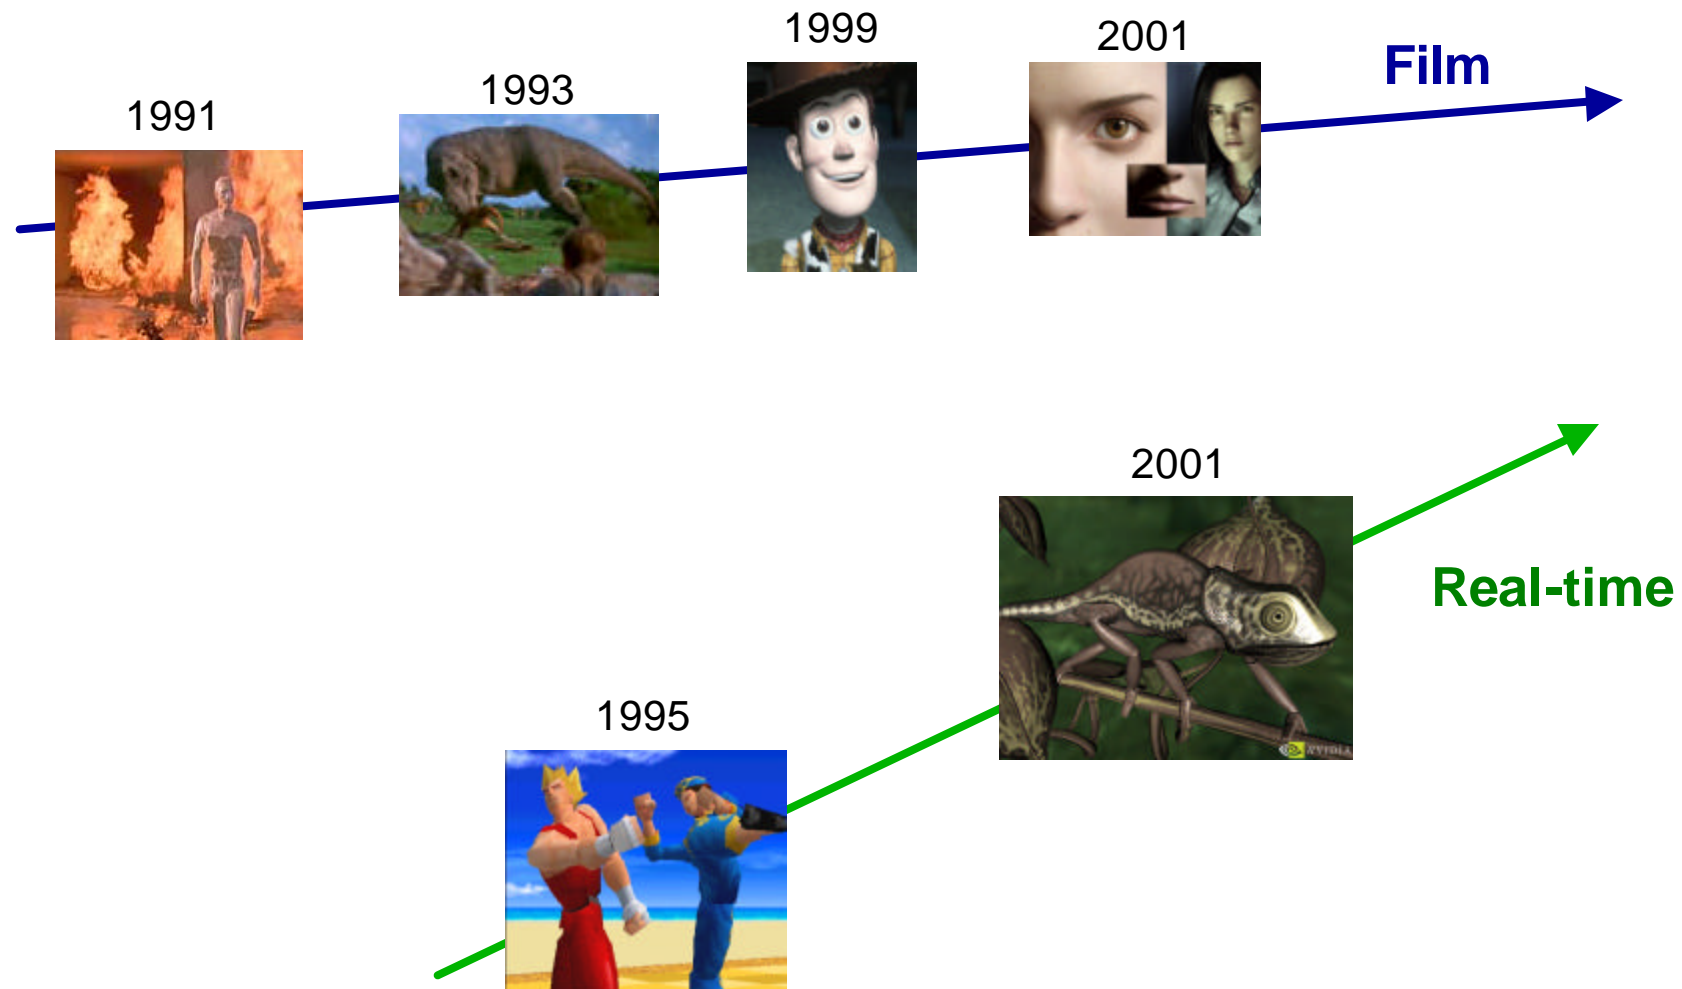

NVIDIA – Moore's Law³

Convergence of Film and Real-time Rendering

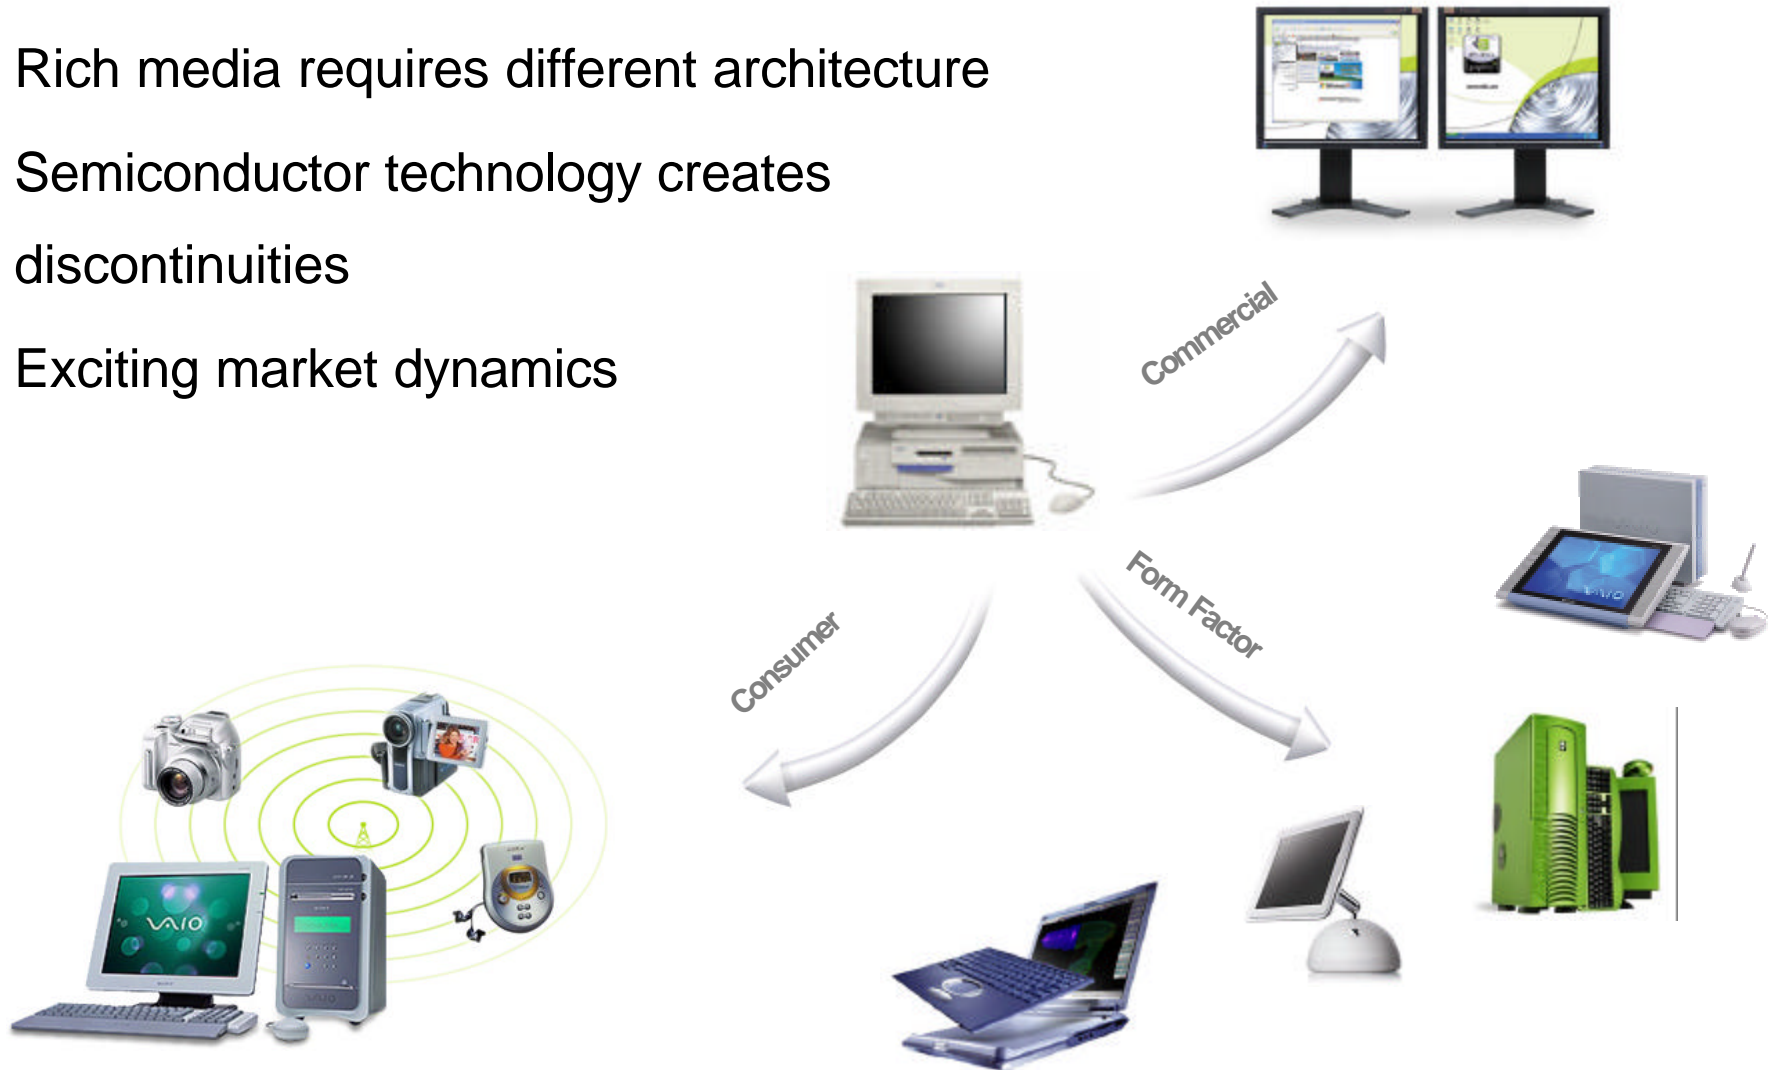

3D is an Exciting Growth Market

- A very large market
- Tons of headroom
- Large barriers to entry
- Compelling content
- End user passion

Personal Computers

- One size does not fit all
- Rich media requires different architecture
- Semiconductor technology creates discontinuities
- Exciting market dynamics

Traditional PC Architecture – *Single Powerful Microprocessor*

Modern PC Architecture – *Multiple Specialized Processors*

PC is the Center of “Digital Revolution”

Panels Become Pervasive
