Wood Group Pressure Control Wins \$1 Million + Contract with Total E & P Ltd

Wood Group Pressure Control (“WGPC”), part of international energy services company John Wood Group PLC (“Wood Group”), have been awarded a contract worth more than \$1 Million by Total E & P Ltd, Aberdeen.

The contract is for the production of 5-1/8” and 6-3/8” Spacer Spools to fit between the existing wellhead and production tree on the Alwyn platform. Total identified that a number of wells on the platform would benefit from natural gas lift assistance. By fitting the Spacer Spools, the production of the wells will increase through the use of a Concentric Inverse Gas Lift System, this deploys coiled tubing to the bottom of the well through which high pressure gas is injected allowing the reservoir to produce more hydrocarbons.

The precision machined spools, 1.30 metres high and rated to 10,000 lbs working pressure, are required to seal and house other critical components vital to the deployment of the gas system. “Manufactured in the UK with the WGPC engineering support in Houston, the spools were delivered on

time and tested to the full satisfaction of Total E & P” explained Jim Thomson, General Manager WGPC Peterhead. “These spools, along with the coiled tubing, down hole safety components and other items will now be sent offshore and installed in the summer to further enhance Totals production.”

Notes to editors:

Wood Group is an international energy services company with approximately \$3.5bn sales, employing more than 22,000 people worldwide and operating in 46 countries. The Group has three businesses — Engineering & Production Facilities, Well Support, and Gas Turbine Services — providing a range of engineering, production support, maintenance management and industrial gas turbine overhaul and repair services to the oil & gas, and power generation industries worldwide.

Wood Group Pressure Control designs and manufactures wellhead systems, gate valves, chokes and actuators that control formation pressures and product flow from initial drilling through production for oil companies around the world. Also offered are repair, maintenance and remanufacturing services for wellhead systems, gate valves and flow control products. Wood Group Pressure Control operations are conducted by more than 1000 employees from 27 locations in the United States and from 21 other international locations. Manufacturing facilities are located in Oklahoma, Canada, Scotland, Indonesia, Australia, Venezuela and China.
