MUSTANG PROVIDING DETAILED DESIGN AND AUTOMATION SERVICES ON CANADIAN REFINERY EXPANSION

HOUSTON, TEXAS – Update – Mustang Engineering (“Mustang”), part of international energy services company John Wood Group PLC (“Wood Group”), has been selected to provide detailed design services to International Alliance Group (“IAG”) for the Consumers’ Co-operative Refineries Ltd. (CCRL) \$1.9-billion refinery expansion project in Regina, Saskatchewan, Canada. IAG has been retained by CCRL as program managers for the grass roots portion of the proposed expansion, which would increase the output of Saskatchewan’s only oil refinery by 30 percent.

Mustang completed the front-end engineering design for the project in 2007 and will provide over 600,000 man-hours of work to complete the detailed design. Mustang’s Automation and Control business unit is providing the detailed design, configuration, staging and integration of the process control system for the five new process units and supporting utilities in the refinery expansion.

The grass roots expansion will include a fluid catalytic cracking (FCC) complex to support additional light synthetic crude oil processing from Canada’s oil sands. This expansion will be CCRL’s second large expansion this decade, and would take it above 130,000 barrels per day of crude processing capacity when completed in 2012. Mustang was selected based on previous successful projects with IAG and its extensive FCC unit, refinery expansion, and automation experience.

(More)

Mustang is an independent services provider to the global oil, gas, chemical and manufacturing industries. The company specializes in design, engineering, procurement, project management and construction management and offers these services through its six business units: upstream oil and gas, midstream, pipeline, automation and control, refining and petrochemicals, and process & industrial. Mustang has a staff of 4,300 worldwide, with offices in the United States, United Kingdom, Australia, and India. Its U.S. offices are located in Houston; Birmingham, Alabama; Monroe, Louisiana; Martinez, California; Greenville, South Carolina; Atlanta, Georgia; and Wilmington, Delaware.

Wood Group is an international energy services company with \$4.4bn sales, employing approximately 25,000 people worldwide and operating in 46 countries. The Group has three businesses - Engineering & Production Facilities, Well Support, and Gas Turbine Services - providing a range of engineering, production support, maintenance management and industrial gas turbine overhaul and repair services to the oil & gas, and power generation industries worldwide.

International Alliance Group (IAG), a subsidiary of Triten Corporation, provides single-point responsibility for the development and program management of refinery projects and turnarounds. Since the founding of IAG in 1995, the company has focused on delivering leading-edge FCC technology to an important niche market. For more information about IAG, visit <http://www.triteniag.com>.

Consumers' Co-operative Refineries Limited (CCRL), a wholly owned subsidiary of Federated Co-operatives Ltd. in Regina, Saskatchewan, is the world's first co-operatively owned refinery and was incorporated in 1934. Since those days, CCRL has experienced immense growth in its facilities and has evolved into one of North America's higher value-added petroleum refining facilities, which includes the production of ultra low sulfur gasoline and diesel.
