Plug-and-Play Simplicity – Clearwire Internet Phone Service¹ features simple, plug-and-play installation, requiring no special software or installation appointment. It even works with the customer’s existing phone.

Call Clarity and Quality – Because we own the network, we can control many of the factors that impact the sound and overall quality of your call, meaning when you use your Clearwire Internet Phone Service you’ll have a superior experience.

Savings – Clearwire Internet Phone Service is competitively priced and includes unlimited local and long distance calling to the U.S. Canada and Puerto Rico, as well as competitive rates on international calls.

Plenty of Features – Like your traditional line-based phone, Clearwire Internet Phone Service offers many of the calling features you’ve come to expect — like call forwarding, call waiting and caller ID. We also offer new features, including international call blocking and call screening, voice mail message forwarding to your e-mail account. Plus, Clearwire provides local phone numbers to all its customers, not an out-of-area number that will cause local callers to incur long distance charges every time they call you. And all these features are included in the low monthly rate.

¹ VoIP 911 is different than traditional 911; availability may be delayed or disrupted by power failures, unavailability of broadband connections or delays in moving or establishing your phone number or address; details at Clearwire.com/911.
