COAL SALES BY SECTOR

SHARE PRICE RANGE (\$)

CONSOL Energy's asset base, assembled over our 140 year history, is an enviable one: 4.3 billion tons of proven coal reserves; 1.3 trillion cubic feet of proven natural gas reserves; \$4.0 billion worth of property, plant and equipment; and more than 7,200 experienced, dedicated employees. We continually invest our shareholders' capital in both our physical and our human assets in order to maximize the rate of return from our operations and to enable all of our employees to fully contribute to the success of our company.

Dear Shareholders,

I am pleased to report that our company had one of its best years ever in 2006. We reported net income of \$2.20 per diluted share. Net cash provided by operating activities was \$664.5 million.

Coal production and sales for the year were somewhat lower than last year, reflecting our decision to cutback production to maintain proper supply/demand balance in our key markets. As a consequence, the average sales price on a ton of coal produced was \$38.99, an increase of 9.5 percent compared with last year. Our operating maxim has been to reduce production where market demand will not allow us to earn adequate margins and a fair rate of return on our investment.

On the other hand, sales of company-produced gas increased by 16 percent. The average sales price for natural gas sold by our CNX Gas subsidiary was \$7.04 per thousand cubic feet, an increase of 19.3 percent.

Higher prices outpaced increases in costs, allowing us to post improved unit margins on both our products. As I wrote last year, we are convinced, particularly in our coal business, that increasing margins on stable production is a better strategy than increasing volumes on flat margins. We are not averse to increasing production – so long as customers signal their need for additional volumes through new sales agreements. But if we have to choose between increasing margins and increasing volumes, we will opt for margin expansion.

FINANCIAL FLEXIBILITY

We also have kept our balance sheet sound, giving us considerable financial flexibility. At year end, we had no short-term debt while long-term debt, including the current portion, was only \$552 million. We had nearly \$225 million in cash on hand and retain considerable borrowing capacity on our bank facility and through our accounts receivable securitization program.

We believe that 2007 is a year in which opportunities to acquire assets in coal and gas are likely to occur. We have purposefully maintained as much financial flexibility as we can so that we can act quickly if opportunities arise.

Longer term, I expect that we will undertake some financial re-engineering of the company, but, at the moment, I like the agility that our financial position gives the management team during this next twelve months or so.

A YEAR OF ACCOMPLISHMENTS

We accomplished a number of key objectives in 2006:

- We had our best year ever in safety performance. Injuries and the severity of injuries were reduced substantially, and we had no fatal injuries. We have no higher priority than the safety of our employees and our performance

J. BRETT HARVEY

Brett Harvey, a fourth-generation coal miner, has challenged every employee to help the company eliminate all workplace accidents.

results were not by chance. We focus management time and resources on meeting or exceeding our safety goals, and we are convinced that our goal of zero accidents is achievable.

- We completed four major, long-term sales agreements with power generators for approximately 230 million tons of high-Btu, Northern Appalachian coal with an initial value of \$10 billion. These contracts manifest the value of our investment in high sulfur, high Btu mines in Northern Appalachia. As customers finish retrofitting sulfur removal systems (scrubbers) to their existing fleet of power plants and the disincentive to using high sulfur coal is removed, our high-Btu coal, because of its close proximity to eastern power plants, becomes the logical fuel choice for many buyers.
- In conjunction with our Northern Appalachian strategy, we expanded our river transportation business by acquiring several smaller river operators on the Upper Ohio River, a move that more than doubled our barge fleet and increased our towboats more than three fold. We now have the capacity to serve existing customers better as well as to reach new customers with both coal sales and transportation services.
- We completed a 2-for-1 stock split, and initiated a two-year \$300 million share repurchase program.
- Because of our continued operational and financial improvement, we received upgrades from both Moody's and Standard & Poor's rating agencies.

- We completed a new five-year labor agreement with the United Mine Workers of America, who represent 39 percent of our employees. The new agreement commenced on January 1, 2007 and provided fair increases in wages for employees, and increased company contributions to employee benefit funds while allowing more flexible work schedules that should enhance productivity.
- Finally, on May 31, 2006, I personally certified to the New York Stock Exchange (NYSE) that I was not aware of any violation by CONSOL Energy of the NYSE corporate governance listing standards existing on that date. Further, CONSOL Energy filed with the Securities and Exchange Commission, as an exhibit to our most recent Form 10-K filing, the required Sarbanes-Oxley Act, Section 302 certifications regarding the quality of our public disclosures.

CHALLENGES AND OPPORTUNITIES

Reaching Zero Accidents

Without question, ensuring the safety of our employees is our most important challenge.

Most of our mines are underground. There, the environment is constantly changing. Proper planning, continuous observation, and immediate correction of potentially unsafe conditions are a predicate to preventing accidents.

The human element also is involved in preventing accidents. We emphasize the importance of safety to every employee through training and through activities that continuously create safety awareness. We have built a new training center that

allows us to provide year-round training for both current and new employees.

In addition, we are in the process of developing a new approach to safety awareness and training that we believe will accelerate our drive to zero accidents. The discipline of safety is joining the science of safety with a culture of safety. We will use technology to help us monitor conditions, to provide early identification of problem areas, to improve communications between sites underground and between the underground and the surface, and to enhance the safety of equipment. By deploying technology to augment the efforts of our employees, we strive to eliminate the physical conditions in a mine as a source of an accident.

The culture of safety, on the other hand, involves engaging the mind of every employee and creating safety as an accepted value. This involves constant training regarding safe work practices, regular discussion of safety issues, both at work and at home, and developing programs to acknowledge and reward safe work practices and safety achievements.

RECRUITING THE NEXT GENERATION

Our second challenge relates, in part, to the first. During the next five to seven years, more than half our current work force may elect to retire. As I noted last year, we are in the midst of a significant effort to hire and train a large number of new employees. We have substantially enhanced our recruiting efforts, including launching a new, regional advertising campaign targeted primarily at potential employees.

Thus far, we have met our hiring goals. We offer competitive salary and benefit packages to all employees; our substantial reserve base of coal and gas allows us to offer career opportunities, not just short-term jobs; and our reputation as an industry leader, particularly in safety, draws top quality recruits to us.

Once recruited, our challenge will be to train these new employees to ensure that we utilize their talents and that we provide them with the tools to work safely and productively. We have initiated a number of new programs to rapidly improve on the skills that new employees bring to the job, and to match new employees with experienced ones to provide a transfer of working knowledge and work procedures.

GLOBAL CLIMATE CHANGE AND CARBON CONSTRAINTS

The most important external issue we will face in the next few years will be the potential for statutory or regulatory constraints on carbon dioxide and other greenhouse gas (GHG) emissions into the atmosphere.

The fuels we produce -- coal and gas -- are fossil fuels that, when burned, emit carbon dioxide. Methane is a GHG in its own right. But coal and gas also produce more than two-thirds of the electricity generated in the United States. As such, we believe that these two fuels must and will continue to play an important role in the energy mix of the United States.

I still believe that there is much left to be learned regarding the role of natural forces in the numerous

climate shifts recorded in geologic history compared to the forcing effect manmade emissions have on climate.

Nevertheless, in the interest of our shareowners, the company is prepared to provide policy makers with the principles we believe should be incorporated into any law proposing to address the climate change issue.

Our motivation is to allow our products, particularly coal, to continue to serve a central role in the generation of energy in the United States while addressing GHG concerns. Coal is our nation's most abundant domestic energy resource. Its location is known, we have the means to mine it, the infrastructure to deliver it to market, and the technology to convert it to a more convenient form of energy. Moreover, coal provides the nation with a degree of energy security unmatched by any other source of energy available to us.

INVESTING IN OUR ASSETS

Our business outlook remains very bright, despite the challenges. The U.S. economy will continue to grow, and with it, the demand for energy. The asset base of CONSOL Energy is an enviable one: 4.3 billion tons of proven coal reserves, much of which we own rather than lease; 1.3 trillion cubic feet of proven natural gas reserves; more than 400,000 acres of land; \$4 billion of property, plant and equipment investment; and 7,200 experienced, dedicated employees.

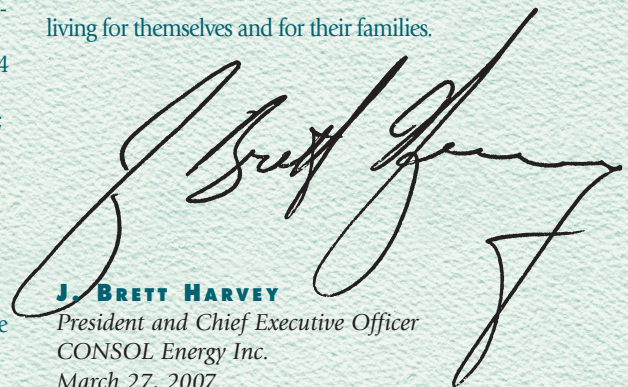

My most important mission is to invest our owners' capital in our assets in a way that maximizes our rate of return. While our management team remains

watchful for acquisition opportunities, we expect to continue to invest in our existing asset base.

We will invest in existing mines to improve safety and efficiency of production as well as expand production where the market warrants; we will continue to accelerate the development of our proven gas reserves; we will continue to seek new opportunities for our service businesses, such as Fairmont Supply and our river operations, to provide more diverse revenue and income streams to the company; we will continue to extract additional value from our land assets; and we will continue to invest in our most valuable asset – our employees.

OUR COMMITMENT TO OUR SHAREOWNERS

We are committed to managing your assets and capital in an ethical, responsible, safe and environmentally sound fashion. We will manage the business to provide shareowners with a sustainable, long-term investment, while generating cash streams that allow shareowners to be rewarded in the short-term as well. And we will manage our human assets in a manner that respects the value that each employee adds to our enterprise. We will help each of them contribute to the success of the company while providing them the opportunity to provide a rewarding living for themselves and for their families.

J. BRETT HARVEY
President and Chief Executive Officer
CONSOL Energy Inc.

C O R P O R A T E R E V I E W

PROJECTS

CONSOL Energy's strategic and financial approach regarding coal capital improvements is to invest in projects that target after-tax rates of return at or above 20 percent.

EFFICIENCY

By investing in efficiency-related projects, our intended goal is to accomplish cost savings at our operations, both from a labor and capital standpoint. Efficiency projects also tend to be low-risk endeavors with proven rates of return.

EFFICIENCY PROJECTS:

Bailey slope and overland belt

Loveridge longwall face extension

Blacksville longwall face extension

Robinson Run longwall face extension

Robinson Run portal

Loveridge fine coal recovery

Shield rebuild programs at multiple mines

EXPANSION

Investing in expansion projects equates to investing in growth opportunities. Our expansion goals are targeted at exploiting our coal reserve base, through greenfield and brownfield mine expansions, as well as maximizing the capacity of our existing infrastructure. To limit the risk of investment, we aim to sign a contract with a significant portion (generally 50 percent) of the production before starting an expansion project. We also ensure that these contracts do not cannibalize existing business.

EXPANSION PROJECTS:

Shoemaker slope and overland belt

Robinson Run slope and overland belt

Keystone prep plant expansion

Buchanan prep plant expansion

The most challenging issue the company is likely to face in the next several years is that of global climate change. CONSOL already is involved in activities that reduce greenhouse gas (GHG) emissions.

Carbon sequestration and greenhouse gas capture projects will involve CNX Land Resources, which recently named James J. McCaffrey (above) as senior vice president, in addition to his duties as vice president - material and supply chain management.

The most challenging issue the company is likely to face in the next several years is that of global climate change. While we believe much remains to be learned regarding the mechanisms that cause changes in climate on a global scale, in so far as political debate in the United States is concerned, discussions surrounding any uncertainties on the topic of global climate change are over – at least for the present time. Man-made greenhouse gas (GHG) emissions, such as carbon dioxide produced from burning fossil fuels, have been identified as the most likely source of the recent warming and the Company now must consider its response to the possibility that the United States will adopt limits on the emission of GHGs.

CONSOL already is involved in activities that reduce GHG emissions. Our most important activity is methane capture by our CNX Gas subsidiary. Methane is a GHG whose impact on atmospheric warming is greater by a factor of 21 than that of carbon dioxide. Methane is contained in the coal seams we mine. During the mining process, this gas is expelled and, in underground mines, must be swept away by the ventilating system in order to eliminate

the threat of methane explosions. By removing methane from coal seams before the coal is mined, we are able to avoid the release of this gas into the atmosphere. In 2005, our capture of methane avoided the equivalent release of nearly 21 million metric tons of carbon dioxide, the third largest amount reported to the United States Department of Energy by any company.

In addition, we are involved in a number of research programs that not only explore ways to capture additional methane, but seek ways to store carbon dioxide permanently underground. For example, in Pennsylvania, in cooperation with the U.S. Department of Energy, CONSOL is developing several experimental gas wells using vertical-to-horizontal drilling technology. One part of the program will drill into coal seams that will not be mined, first draining the methane from the seam and then pumping carbon dioxide into the coal seam to enhance methane recovery but also to test the ability of the carbon dioxide to adsorb into the coal where there once was methane, thereby storing it permanently underground.

According to Thomas F. Hoffman, senior vice president - external affairs, green house gas emissions and its political implications pose one of the most-important challenges facing the energy industry in the United States.

Finally, CONSOL Energy is a founding company of the FutureGen Industrial Coalition. This public/private consortium of U.S.-based and international companies as well as the United States and several other countries, plans to build the first near zero-emission coal-fired power plant. One important component of this effort will be to capture the carbon dioxide emissions of the plant and permanently store them underground.

Y E A R I N R E V I E W

As towboats and barges traverse the Monongahela River near a CONSOL Energy electric utility customer, Deane Orr (above), vice president - river operations, chats with a towboat pilot.

During 2006, CONSOL Energy river vessels transported 24.5 million tons of coal and other commodities, including 11.1 million tons of coal produced by company mines to various customers. Such a tonnage total makes CONSOL Energy a significant shipper along the inland waterways in southwestern Pennsylvania and northern West Virginia.

CONSOL Energy's disciplined approach to production was evident in the 9.5 percent growth rate of average realized prices for company-produced coal versus last year. Due to the company's solid financial position, we are able to fine-tune our production to be more properly aligned with short-term needs of our customers while preserving the future value of our coal assets. The value of our coal assets was recognized in 2006 by four customers who signed long-term sales agreements totaling more than 230 million tons of coal with an initial aggregate value of more than \$10 billion.

During 2006, capital improvements to the Robinson Run Mine in northern West Virginia continued, including the completion of a new preparation plant. Work continues on the overland conveyor belt and related infrastructure.

Coal production in the United States continued to grow in 2006 while modest temperatures across the Northeast and Mid Atlantic regions tempered demand, leading to higher than normal inventories at power plants at year end.

In 2006, CONSOL Energy's coal production was down slightly from the previous year due in part to the planned idling of the Shoemaker Mine in Northern West Virginia to allow for the upgrade from track haulage to a more efficient, belt haulage system. The Shoemaker Mine's belt haulage project was started during the second quarter of 2006. Also contributing to reduced production was the idling of the VP8 Mine in Virginia and the shutdown of the Mahoning Valley Mine in Ohio due to the depletion of reserves that can be economically mined. The company also experienced adverse geological conditions at several mines during the year that resulted in sandstone and rock intrusions and falls on major belt-lines that affected year-over-year production.

Three of our mines produced more than 10 million tons each during the fiscal year; Bailey Mine (10.2 million tons); Enlow Fork Mine (10.7 million tons); and McElroy Mine (10.5 million tons). These were the top three underground coal producing mines in the United States in 2006. The

McElroy Mine set a record for production for the second straight year and the company's Loveridge Mine tied last year's record for production from that complex (6.4 million tons). The Buchanan Mine also set a production record by mining 5.0 million tons of metallurgical coal during the year.

Two major capital projects were completed during the year. A new preparation plant was completed during the year at the Robinson Run Mine and placed into service in August 2006. The Robinson Run slope and overland belt that is currently under construction and slated to be completed in 2007 along with the new preparation plant is expected to increase production capacity by approximately 20 percent. An underground bunker capable of storing 750 tons of coal also was completed at the Loveridge Mine during the third quarter. This bunker allows the mine to efficiently manage coal inventories and belt availability and partially contributed to the record-setting production at Loveridge during the year.

CONSOL Energy sold 68.9 million tons of coal in 2006, down from 70.4 million tons of coal sold the year before. More than 90% of our sales were sold domestically and approximately 66% of our direct sales were to domestic electricity generators.

Enlow Fork Mine once again claimed the top spot as the leading underground coal mine in the nation, with 10.7 million tons produced. According to Peter B. Lilly (below), president - coal group, three of CONSOL Energy's underground mines, Enlow Fork, McElroy and Bailey, each surpassed 10 million tons of coal production during 2006.

An aggressive training and mentoring program will enable CONSOL Energy to prepare a next generation of qualified employees.

Also during 2006, CONSOL Energy signed four long-term sales agreements totaling more than 230 million tons of coal with an initial aggregate value of more than \$10 billion during 2006 with American Electric Power, Duke Power, FirstEnergy and PPL. The four agreements underscore the value our customers place on the secure, long-term supply of high-Btu coal available from the company's extensive reserve base as well as the reliable and cost-effective transportation options that are available to those power generators.

COAL PRICING

For 2006, CONSOL Energy's average realized price received for company-produced coal was \$38.99 per ton, up \$3.38 per ton or 9.5%, from 2005. Our realized pricing continues a multi-year trend of higher pricing for our steam and metallurgical coal. One of the primary drivers for the robust pricing for our steam coal is the growing demand from existing coal-fired power generators that are retrofitting their units with flue gas desulfurization technology (scrubbers). Scrubber technology is used to remove sulfur dioxide (SO₂) from the exhaust flue gases in coal-fired power plants.

At year-end 2006, there were approximately 55 gigawatts of scrubbed coal-fired power generation East of the Mississippi River with an additional 85 gigawatts scheduled to be scrubbed by 2012, according to public announcements by electric power generators. The additional 85 gigawatts equates to an opportunity of more than 200 million tons for high-Btu, high-sulfur steam coal for companies such as CONSOL, whose steam coal has a typical heating value of 12,000 to 14,000 Btu/lb.

COSTS

Total costs per ton of company-produced coal were \$32.53 in 2006, up \$2.47 or 8.2 percent from 2005. Operating costs per ton of coal comprised \$24.79 or approximately 76.2 percent of the total costs per ton, and were up 11.3 percent versus 2005. Operating costs were up for the year due to lower production, higher costs for commodities that we use in our mines and preparation plants as well as higher labor costs.

Non-operating costs per ton decreased to \$4.55 from \$4.93, or 7.7 percent, primarily due to lower health and retirement benefit costs in 2006.

Depreciation, depletion and amortization costs were \$3.19 per ton up from \$2.85 last year, primarily reflecting projects that were placed into service during 2006. Total capital expenditures for our coal segment were \$481.6 million for the year.

SAFETY

In early 2006, several mine accidents occurred at competitors' mining operations and encouraged the U.S. Congress to enact the Mine Improvement and New Emergency Response Act (MINER Act). As an industry leader in safety, CONSOL Energy worked with various mining associations, regulatory agencies and labor during this period to develop and improve mine safety legislation.

We know that a safe mine is a productive mine. CONSOL Energy's 2006 year-end incident rate for our coal operations segment was 3.23 per 200,000 hours of exposure and compares to the U.S. Department of Labor Mine Safety and Health Administration's underground bituminous mine industry incident rate for 2006 of 7.43 (preliminary through the first nine months)

Several capital improvement projects at various CONSOL Energy sites have increased efficiencies and enhanced operations.

Bart J. Hyita, chief operating officer - coal, anticipates nearly \$360 million in capital improvements for the upcoming year for coal operations.

per 200,000 hours of exposure. In addition, four out of our six highest producing underground mines had safety incident rates below 3.0.

Looking to the future, CONSOL's management team is in the process of developing a long term strategic plan to continually improve safety performance. This initiative, combined with one of the best safety incident rates in the industry, will be very instrumental in achieving our goal of ZERO accidents. In addition to this strategic initiative, CONSOL Energy has established a leadership training process that is designed to educate

and train our next generation of leaders, with safety being one of the major training components.

CONSOL Energy has a total of 12 mine rescue teams that are trained in underground fire-fighting techniques as well as search, rescue and recovery in underground mine emergencies. These teams have played a vital role in the emergencies that have recently impacted the industry. Mine rescue team participation is voluntary and highlights the commitment our miners have for the safety and well-being of their fellow miner.

In 2006, CONSOL Energy augmented its energy service activity through the strategic acquisition of Mon River Towing and J.A.R. Barge Lines. This acquisition expands the company's river transportation business to approximately 600 barges, 17 towboats and 5 harbor boats and enhances our position on the energy supply chain. Along with our expanded transportation services, we offer customers dock services on the inland waterways and export services through our port in Baltimore. We are also the only coal company in the United States that has an internal R&D function that provides research services to customers for projects such as energy efficiency and pollution reduction.

CONSOL Energy subsidiary CNX Marine Terminals offers a variety of trans-shipment capabilities.

CONSOL Energy more than doubled shipments of coal and other commodities along the inland waterways in 2006 to 24.5 million tons from 10.6 million the prior year.

CONSOL Energy, through our Energy Sales Company, owns and manages transportation and terminal storage services that enhance our coal operations and provide logistical services to various third parties. We also provide industrial services and research and development services for use both in-house and to third-parties to augment the value of our energy products.

RIVER AND DOCK SERVICES

In 2006, CONSOL Energy acquired the river assets of Mon River Towing Company and J.A.R. Barge Lines, LP. This strategic acquisition augmented our existing river fleet, which presently consists of 17 towboats, 5 harbor boats and approximately 600 barges.

Located in Speers and Elizabeth, Pa., our river operations primarily transport coal and, to a lesser extent, other non-coal commodities from river loadout facilities to power generation customers that are mostly located along the Ohio and Monongahela Rivers in northern West Virginia and southwestern Pennsylvania. During 2006, our river fleet transported approximately 24.5 million tons of coal and other commodities, up from approximately 10.6 million tons of coal in 2005, reflecting the capacity increase by the acquisition executed

earlier in the year. Approximately 11.1 million tons of coal produced by CONSOL Energy mines during the year was transported via our river vessels and represents 16.5 percent of our 2006 total company coal production.

CONSOL Energy also operates the Alicia Dock along the Monongahela River in southwestern Pennsylvania, whereby the company transfers coal from rail cars to barges for customers that receive steam or metallurgical coal on the river system. The Alicia Dock has an annual capacity of 9 million tons of coal and has dual rail access by both the Norfolk Southern and CSX Transportation Inc. The dock is also served by several different river transportation companies. In 2006, the Alicia Dock's throughput tonnage was approximately 6.5 million tons.

TERMINAL SERVICES

CNX Marine Terminals Inc., a CONSOL Energy subsidiary, owns and operates an exporting terminal in the Port of Baltimore that offers customers a range of transshipment options. The terminal can load coal directly either from storage or from rail cars into ocean vessels and is served by two railroads, Norfolk Southern and CSX Transportation.

More than 11 million tons of company-produced coal made its way to river-based customers during 2006.

CONSOL Energy's research and development efforts during 2006 included testing of various methods for generating clean power from waste fuels and directly from coal-mine methane gas.

The port affords CONSOL Energy a strategic advantage by giving the company an alternative export facility to ship steam and metallurgical coal to the rest of the world. In 2006, approximately 5.7 million tons of coal were shipped through our Port of Baltimore, up from 5.0 million tons last year. Approximately 2.3 million tons of the tonnage shipped in 2006 was produced by CONSOL Energy coal mines.

The terminal has ground storage capabilities of 1.3 million tons and an annual throughput capacity of approximately 18 million tons.

RESEARCH SERVICES

CONSOL Energy's Research & Development department focuses on energy development, improving energy efficiency and reducing emissions through research, development, and demonstration of new energy-related technologies and integration of existing technologies for coal and gas production and consumption, as well as evaluating the commercial viability of numerous energy technologies.

The primary function of CONSOL R&D is to identify, develop, and apply technology to support the production and marketing functions of CONSOL Energy's coal and gas operations and assist other departments with technical expertise.

CONSOL R&D is engaged in the development and demonstration of emissions control technologies for existing power plants, greenhouse gas reduction technologies, and carbon sequestration technologies. CONSOL R&D also provides technical and analytic expertise to government and private clients.

CONSOL R&D has been active for many years in greenhouse gas reduction research and development. At present CONSOL R&D has a DOE project involving carbon dioxide sequestration with simultaneous enhanced coal bed methane recovery, a project involving utilization of vented coal mine methane for production of power using a microturbine, and a project demonstrating a commercial-size device known as a thermal flow reversal reactor that is expected to oxidize $\geq 95\%$ of the methane in mine ventilation air reducing its global warming potential by 87%.

CONSOL R&D is also involved in various other technology projects and initiatives, including participation in the FutureGen Alliance. FutureGen is a public-private partnership between the U.S. Department of Energy and major electric generators and coal producers that will design, build and operate the world's first coal-fueled, near-zero emissions power plant. CONSOL's R&D brings its valuable technical expertise to this endeavor.

During 2006, CONSOL Energy was awarded two contracts by the U.S. Department of Energy.

The first award demonstrates an innovative, multi-pollutant control technology at the coal-fired, electric-generating AES Greenidge station in Dresden, NY.

CONSOL R&D is leading a team that includes AES Greenidge LLC and Babcock Power Environmental Inc. to install and test an integrated multi-pollutant control system on one of the nation's smaller existing coal-fired power plants. The goal of the project is to demonstrate that the control system being installed can cost-effectively reduce emissions from coal-fired electric generating units with capacities of 50 to 400 megawatts, which is small by industry standards.

Industry analysts estimate that there are approximately 440 coal-fired units in the U.S. with capacities of 50 to 400 megawatts that are currently not equipped with multi-pollutant control technologies.

The second award is for a full-scale field trial of CONSOL R&D's Low-Temperature Mercury Control (LTMC) process at Unit 1 of the PPL Martins Creek Station. LTMC has the ability to reduce mercury emissions by over 90%, as was recently demonstrated by CONSOL R&D on a slip-stream pilot plant at the Allegheny Energy Mitchell Station.

Demonstration of the performance, operability, and economics on a full-scale utility boiler is the next step toward deployment of the technology.

INDUSTRIAL SERVICES

Fairmont Supply Company, a CONSOL Energy subsidiary, is a distributor of mining and industrial sup-

plies in the United States. Fairmont supply also provides integrated supply procurement and management services through 13 customer service centers nationwide. Fairmont Supply's integrated supply procurement is a materials management strategy that utilizes a single, full-line distribution approach to minimize total cost in the maintenance, repair and operating supply chain.

During 2006, Fairmont Supply provided various mining supplies to CONSOL Energy's mines. Approximately 52 percent of Fairmont Supply's sales were made to CONSOL Energy coal mines.

WASTE MANAGEMENT SERVICES

CONSOL Energy operates an ash disposal facility on a 61-acre site in northern West Virginia to handle ash residues for coal customers that are unable to dispose of ash on-site at their generating facilities. The ash disposal facility can process 200 tons of material per hour and disposes of approximately 120,000 tons of fly ash annually. CONSOL Energy has a long-term contract with a cogeneration facility to supply coal and take the residual fly ash and bottom ash. The bottom ash is disposed of locally at the cogeneration facility for road construction and other purposes.

CONSOL's Energy Services offer customers reliable transportation options, as well as a wide array of mining and industrial supplies.

Supporting CONSOL Energy's coal and gas operations is paramount to CNX Land's goal of extracting value from our land holdings. But we also generate income through a strategy of sustainable harvesting of timber. In addition, we continued our multi-year involvement on the University Town Center retail shopping complex in Morgantown, W.Va. that was formerly the site of a depleted CONSOL Energy mine. We also have a policy of donating land for public use and restoring properties for commercial uses.

Work progressed on the University Town Center retail development near Morgantown, W.Va., with several new stores opening for business during 2006.

Through CONSOL Energy's CNX Land subsidiary, the company owns approximately 400,000 surface acres of land in the United States and Canada.

CNX Land's central goal is to develop surface properties that support the company's coal and gas operations. CNX Land also generates operating income through mineral royalties, sustainable timbering, farm rentals, retail development and asset sales.

CNX Land continues its work on the University Town Centre project in Morgantown, WV. The development is located on acreage that previously was the site of CONSOL's Arkwright Mine's coal preparation plant and coal refuse operations. The company's reclamation efforts at the University Town Centre were recognized during the 2006 West Virginia Business Summit, where the company was presented with the West Virginia Business Environmental Leadership Award in the Environmental Stewardship Division.

In addition to commercial management of land holdings, we also work with several conservation

groups and have a policy of donating property to non-profit groups and local community organizations for various uses. For example, in 2006 CNX Land made available more than 4,000 acres of land through a cooperative management agreement to the Ohio Department of Natural Resources (ODNR) Division of Wildlife, whereby the land will be used by the public for various wildlife activities. The agreement with ODNR was supported through partnerships and cooperation of the Ruffed Grouse Society and the National Wild Turkey Federation, in which CNX Land is a certified member.

Richard J. Perin (top), project engineer, accepted an environmental award presented by the state of West Virginia for CONSOL Energy's University Town Center project. Robert P. King (below) was appointed president of CNX Land in 2006.

2006 coal production of 1.1 million tons

Coal reserves at year end of 31.3 million tons

2006 coal production of 53.2 million tons

Coal reserves at year end of 2,715.6 million tons

Coal reserves at year end of
424.3 million tons

290 gas development wells
at year end

CONSOL Energy is the largest producer of high-Btu bituminous coal and has the second largest recoverable coal reserves among coal producers in the United States. As of December 31, 2006, we had 14 bituminous coal mining complexes in six states with year-end coal reserves of approximately 4.3 billion tons.

In 2006, approximately 97% of the company's coal production came from multiple underground mines in Northern and Central Appalachia as well as the Emery Mine in Utah. The remaining 3% of the company's coal production came from various surface mining operations in West Virginia and Virginia.

CONSOL Energy also is the majority shareholder (81.5%) of CNX Gas Corporation. CNX Gas produces coalbed methane gas from CONSOL Energy coal properties in Pennsylvania, Virginia and West Virginia and conventional gas from properties in Tennessee and Virginia. CNX Gas produces approximately 161 million cubic feet of net average production per day and had year-end net proved gas reserves of approximately 1.3 trillion cubic feet.

CNX GAS OPERATIONS

(As of December 31, 2006)

VIRGINIA **Southwest**

PENNSYLVANIA **Southwest**

WEST VIRGINIA **Northern**

TENNESSEE **Northeastern**

CONSOL Energy's gas operations are primarily conducted by CNX Gas Corporation, a subsidiary in which CONSOL Energy owns 81.5%. CNX Gas trades on the New York Stock Exchange under the ticker symbol "CXG". CNX Gas' strategy is to focus first on locations that have the highest economical rate of return and second to acquire reserve additions. The drilling program at CNX Gas consists of two developmental plays and two exploratory plays.

CNX Gas reported net income of nearly \$160 million, of which \$130 million was recorded as income by CONSOL Energy.

The Virginia operation is CNX Gas' traditional area of operation where vertical wells are drilled ahead of mining to capture coal bed methane. The second developmental play is 'Mountaineer' in northwestern West Virginia and southwestern Pennsylvania where vertical to horizontal well technology is employed. The two exploratory plays are: the 'Nittany', a coal bed methane play in central Pennsylvania; and the 'Cardinal', a New Albany shale play in western Kentucky and southern Illinois.

CNX Gas engages in the exploration, development and production of natural gas in the Appalachian Basin, primarily in southwestern Virginia. CNX Gas is also a leading developer of coalbed methane, which is the gas that resides in coal seams, and owns the rights associated with coalbed methane from the 4.3 billion tons of proved coal owned or controlled by CONSOL Energy.

In 2006, CNX Gas began its Mountaineer project, where the company is drilling 15 vertical-to-

horizontal well on 523,000 acres in Northern Appalachia that produces coalbed methane from the Pittsburgh 8 coal seam. Additionally, the Jewell Ridge Pipeline was placed into service in October 2006. With a total daily capacity of 235,000 MMBtu, the 32 mile lateral pipeline provides an alternative delivery point to the East Tennessee Interstate Pipeline and is expected to minimize the impact of pipeline curtailments and transportation costs.

For 2006, CNX Gas had net income of \$159.9 million, or \$1.06 per diluted share. Of this amount, \$130.3 million was reported as income by CONSOL Energy. CNX Gas produced 56.1 billion cubic feet of gas during the year, up 7.7 billion cubic feet from 2005. CNX Gas also brought 316 wells online during the year bringing the total to 2,636 net producing wells. The gas company also had ten drilling rigs operating at year end, up from six a year earlier.

CONSOL Energy currently holds approximately 123 million shares of CNX Gas.

CNX Gas added 316 new wells during 2006, bringing its total to 2,636 producing wells.

As president and CEO of CNX Gas Corporation, Nicholas J. Delulio oversees one of the largest gas producers in the Appalachian Basin, with 56.1 billion-cubic-feet of gas produced in 2006.

FINANCIAL REVIEW

* FISCAL YEAR 2005 INCLUDES GAIN ON SALE OF 18.5% INTEREST IN CNX GAS

According to William J. Lyons (above), executive vice president and chief financial officer, CONSOL Energy turned in a solid fiscal year 2006. Reasons for the strong year, reported Mr. Lyons, were an increase in demand for Northern Appalachia coal, which helped to sustain prices there, and CONSOL Energy's diversity of fuel products.

In addition, four large sales agreements signed last year for coal supplies to scrubbed generating stations, a commitment to market discipline and several capital improvement projects begun last year will have positive effects on results in the near term, Lyons said.

SELECTED FINANCIAL DATA

The following table presents our selected consolidated financial and operating data for, and as of the end of, each of the periods indicated. The selected consolidated financial data for, and as of the end of, each of the years ended December 31, 2006, 2005, 2004, 2003 and 2002 are derived from our audited consolidated financial statements. The selected consolidated financial and operating data are not necessarily indicative of the results that may be expected for any future period. The selected consolidated financial and operating data should be read in conjunction with "Management's Discussion and Analysis of Financial Condition and Results of Operation" and the financial statements and related notes included in this report.

N O T E S T O F I V E Y E A R F I N A N C I A L S U M M A R Y

- (A)** See Note 27 of Notes to Consolidated Financial Statements for sales and freight by operating segment.
- (B)** Basic earnings per share are computed using weighted average shares outstanding. Differences in the weighted average number of shares outstanding for purposes of computing dilutive earnings per share are due to the inclusion of the weighted average dilutive effect of employee and non-employee director stock options granted, totaling 2,283,374 shares, 2,045,072 shares, 1,938,504 shares, no shares, and 210,926 shares for the year ended December 31, 2006, 2005, 2004, 2003 and 2002.
- (C)** On May 4, 2006, CONSOL Energy's Board of Directors declared a two-for-one stock split of the common stock. The stock split resulted in the issuance of approximately 92.5 million additional shares of common stock. Shares and earnings per share for all periods presented are reflected on a post-split basis.
- (D)** Includes sales of coal produced by CONSOL Energy and purchased from third parties. Of the tons sold, CONSOL Energy purchased the following amount from third parties: 1.3 million tons in the year ended December 31, 2006; 1.5 million tons in year ended December 31, 2005; 2.1 million tons in the year ended December 31, 2004; 2.5 million tons in the year ended December 31, 2003 and 2.5 million tons in the year ended December 31, 2002. Also, includes 1.1 million sales tons which is 100% of tons sold by our fully consolidated, 49% owned variable interest entity. Sales of coal produced by equity affiliates were insignificant in the year ended December 31, 2005. Sales of coal produced by equity affiliates in previous periods were 0.1 million tons in the year ended December 31, 2004; 1.0 million tons in the year ended December 31, 2003 and 1.6 million tons in the year ended December 31, 2002.
- (E)** Amounts include intersegment transactions. For entities that are not wholly owned but in which CONSOL Energy owns at least 50% equity interest, includes a percentage of their net production, sales or reserves equal to CONSOL Energy's percentage equity ownership. For coal, amounts include 100% of our fully consolidated, 49% owned variable interest entity. Also for coal, Glennies Creek Mine is reported as an equity affiliate through February 2004. Glennies Creek Mine is reported as an equity affiliate for the entire December 2003 period. Our proportionate share of the recoverable coal reserves for Glennies Creek Mine is 9.6 million tons at December 31, 2003. Line Creek was reported as an equity affiliate through February 2003. Line Creek Mine and Glennies Creek Mine are reported as equity affiliates for the entire December 31, 2002 period. Our proportionate share of the recoverable coal reserves for Line Creek Mine and Glennies Creek Mine is 30.7 million tons and 10.2 million tons, respectively at December 31, 2002. For gas, amounts include 100% of CNX Gas' basis; they exclude the 18.5% minority interest reduction. Also for gas, Knox Energy makes up the equity earnings data in 2006, 2005, 2004, 2003 and 2002. Greene Energy was part of equity earnings in 2002. Our proportionate share of proved reserves for gas equity affiliates is 2.2 bcf, 2.7 bcf, 2.4 bcf, 0.8 bcf and 0.6 bcf at December 31, 2006, 2005, 2004, 2003 and 2002, respectively. Sales of gas produced by equity affiliates were 0.22 bcf in the year ended December 31, 2006; 0.23 bcf in the year ended December 31, 2005; 0.20 bcf in the year ended December 31, 2004; .08 bcf in the year ended December 31, 2003 and .22 bcf in the year ended December 31, 2002.
- (F)** Represents proven and probable coal reserves at period end.
- (G)** Represents average net sales price before the effect of derivative transactions.
- (H)** Represents proved developed and undeveloped gas reserves at period end.
- (I)** EBIT is defined as earnings before deducting net interest expense (interest expense less interest income) and income taxes. EBITDA is defined as earnings before deducting net interest expense (interest expense less interest income), income taxes and depreciation, depletion and amortization. Although EBIT and EBITDA are not measures of performance calculated in accordance with generally accepted accounting principles, management believes that they are useful to an investor in evaluating CONSOL Energy because they are widely used in the coal industry as measures to evaluate a company's operating performance before debt expense and cash flow. Financial covenants in our credit facility include ratios based on EBITDA. EBIT and EBITDA do not purport to represent cash generated by operating activities and should not be considered in isolation or as a substitute for measures of performance in accordance with generally accepted accounting principles. In addition, because EBIT and EBITDA are not calculated identically by all companies, the presentation here may not be comparable to other similarly titled measures of other companies. Management's discretionary use of funds depicted by EBIT and EBITDA may be limited by working capital, debt service and capital expenditure requirements, and by restrictions related to legal requirements, commitments and uncertainties. A reconciliation of EBIT and EBITDA to financial net income is as follows:

(In thousands) (Unaudited)	TWELVE MONTHS ENDED DECEMBER 31,				
	2006	2005	2004	2003	2002
Net Income (Loss)	\$ 408,882	\$ 580,861	\$ 198,582	\$ (7,798)	\$ 11,676
Add: Interest expense	25,066	27,317	31,429	34,451	46,213
Less: Interest income	(15,369)	(8,066)	(5,376)	(5,602)	(5,738)
Less: Interest income included in export sales excise tax resolution	—	—	—	(696)	(1,282)
Less: Cumulative Effect of Changes in Accounting for Workers' Compensation Liability, net of Income Taxes of \$53,080	—	—	(83,373)	—	—
Less: Cumulative Effect of Changes in Accounting for Mine Closing, Reclamation and Gas Well Closing Costs, net of Income taxes of \$3,035	—	—	—	(4,768)	—
Add: Income Tax Expense (Benefit)	112,430	64,339	(32,646)	(20,941)	(52,099)
Earnings (Loss) before interest and taxes (EBIT)	531,009	664,451	108,616	(5,354)	(1,230)
Add: Depreciation, depletion and amortization	296,237	261,851	280,397	242,152	262,873
Earnings before interest, taxes and depreciation, depletion and amortization (EBITDA)	\$ 827,246	\$ 926,302	\$ 389,013	\$ 236,798	\$ 261,643

- (J)** For purposes of computing the ratio of earnings to fixed charges, earnings represent income from continuing operations before income taxes plus fixed charges. Fixed charges include (a) interest on indebtedness (whether expensed or capitalized), (b) amortization of debt discounts and premiums and capitalized expenses related to indebtedness and (c) the portion of rent expense we believe to be representative of interest. For the year ended December 31, 2003 and December 31, 2002, fixed charges exceeded earnings by \$24.7 million and \$30.6 million, respectively.

ANNUAL MEETING

The annual meeting of shareholders will be held on Tuesday, May 1, 2007, in Pittsburgh, PA. A formal notice of the meeting together with the proxy statement was mailed to shareholders on or about March 30. The proxy statement also can be accessed electronically through the CONSOL Energy home page on the Internet at <http://www.consolenergy.com>. A summary report of the proceedings at the annual meeting will be available without charge upon written request to:

Mr. P. Jerome Richey
 Vice President, General Counsel and Corporate Secretary
 CONSOL Energy Inc.
 1800 Washington Road
 Pittsburgh, PA 15241

ADDITIONAL INFORMATION

A copy of CONSOL Energy's Annual Report on Form 10-K filed with the Securities and Exchange Commission also is available upon written request, or through the Internet.

INVESTOR INFORMATION

Investment analysts and portfolio managers who need additional information may contact Thomas F. Hoffman, Sr. Vice President – External Affairs, at (412) 831-4060.

COMMON STOCK

CONSOL Energy Inc. common stock is traded on the New York Stock Exchange under the symbol CNX.

COMMON STOCK MARKET PRICES AND DIVIDEND

Our common stock is listed on the New York Stock Exchange. The following table sets forth for the quarters indicated, the opening, high, low, and closing share price, as well as the regular quarterly dividend.

Quarter ended:	Open	High	Low	Close	Dividends Paid
Q4 2006	\$ 31.72	\$ 38.71	\$ 28.69	\$ 32.13	\$ 0.07
Q3 2006	\$ 47.05	\$ 48.90	\$ 28.07	\$ 31.73	\$ 0.07
Q2 2006	\$ 37.55	\$ 49.09	\$ 35.12	\$ 46.72	\$ 0.07
Q1 2006	\$ 33.08	\$ 37.70	\$ 30.00	\$ 37.08	\$ 0.07
Q4 2005	\$ 38.75	\$ 39.90	\$ 26.80	\$ 32.59	\$ 0.07
Q3 2005	\$ 26.90	\$ 38.72	\$ 26.85	\$ 38.13	\$ 0.07
Q2 2005	\$ 24.00	\$ 27.49	\$ 20.77	\$ 26.79	\$ 0.07
Q1 2005	\$ 20.52	\$ 24.62	\$ 18.58	\$ 23.51	\$ 0.07
Q4 2004	\$ 17.56	\$ 21.95	\$ 16.05	\$ 20.53	\$ 0.07
Q3 2004	\$ 18.00	\$ 19.62	\$ 14.90	\$ 17.44	\$ 0.07
Q2 2004	\$ 13.87	\$ 18.36	\$ 12.42	\$ 18.00	\$ 0.07
Q1 2004	\$ 13.02	\$ 15.00	\$ 10.12	\$ 13.40	\$ 0.07

On January 30, 2007, there were approximately 51,512 holders of record of our common stock.

The Board of Directors decides each quarter on the dividend to be paid, if any. No assurance can be made that a dividend will continue to be paid, or that it will continue to be paid at the current level.

FORWARD-LOOKING STATEMENTS

We are including the following cautionary statement in this document to make applicable and take advantage of the safe harbor provisions of the Private Securities Litigation Reform Act of 1995 for any forward-looking statements made by, or on behalf, of us. With the exception of historical matters various statements in this document, including those that express a belief, expectation, or intention, as well as those that are not statements of historical fact, are forward-looking statements (as defined in Section 21E of the Securities Exchange Act of 1934) that involve risks and uncertainties that could cause actual results to differ materially from projected results. Accordingly, investors should not place undue reliance on forward-looking statements as a prediction of actual results. The forward-looking statements may include projections and estimates concerning the timing and success of specific projects and our future production, revenues, income and capital spending. When we use the words "believe," "intend," "expect," "may," "should," "anticipate," "could," "would," "will," "estimate," "plan," "predict," "project," or their negatives, or other similar expressions, the statements which include those words are usually forward-looking statements. When we describe strategy that involves risks or uncertainties, we are making forward-looking statements. The forward-looking statements in this document speak only as of the date of this document; we disclaim any obligation to update these statements unless required by securities law, and we caution you not to rely on them unduly. We have based these forward-looking statements on our current expectations and assumptions about future events. While our management considers these expectations and assumptions to be reasonable, they are inherently subject to significant business, economic, competitive, regulatory and other risks, contingencies and uncertainties, most of which are difficult to predict and many of which are beyond our control. These risks, uncertainties and contingencies include, but are not limited to, the following:

- an extended decline in prices we receive for our coal and gas affecting our operating results and cash flows;
- reliance on customers extending existing contracts or entering into new long-term contracts for coal;
- reliance on major customers;
- our inability to collect payments from customers if their creditworthiness declines;
- the disruption of rail, barge and other systems that deliver our coal;
- a loss of our competitive position because of the competitive nature of the coal industry and the gas industry, or a loss of our competitive position because of overcapacity in these industries impairing our profitability;
- our inability to hire qualified people to meet replacement or expansion needs;
- coal users switching to other fuels in order to comply with various environmental standards related to coal combustion;
- the inability to produce a sufficient amount of coal to fulfill our customers' requirements which could result in our customers initiating claims against us;
- the risks inherent in coal mining being subject to unexpected disruptions, including geological conditions, equipment failure, timing of completion of significant construction or repair of equipment, fires, accidents and weather conditions which could cause our results to deteriorate;
- increases in the price of commodities used in our mining operations could impact our cost of production;
- obtaining governmental permits and approvals for our operations;
- the effects of government regulation;
- the effects of stringent federal and state safety regulations;
- the effects of mine closing, reclamation and certain other liabilities;
- uncertainties in estimating our economically recoverable coal and gas reserves;
- we do not insure against all potential operating risks;
- the outcomes of various legal proceedings, which proceedings are more fully described in our reports filed under the Securities Exchange Act of 1934;
- increased exposure to employee related long-term liabilities;
- our participation in multi-employer pension plans may expose us to obligations beyond the obligation to our employees;
- lump sum payments made to retiring salaried employees pursuant to our defined benefit pension plan;
- our ability to comply with laws or regulations requiring that we obtain surety bonds for workers' compensation and other statutory requirements;
- acquisitions that we recently have made or may make in the future including the accuracy of our assessment of the acquired businesses and their risks, achieving any anticipated synergies, integrating the acquisitions and unanticipated changes that could affect assumptions we may have made;
- the anti-takeover effects of our rights plan could prevent a change of control;
- risks in exploring for and producing gas;
- new gas development projects and exploration for gas in areas where we have little or no proven gas reserves;
- the disruption of pipeline systems which deliver our gas;
- the availability of field services, equipment and personnel for drilling and producing gas;
- replacing our natural gas reserves which if not replaced will cause our gas reserves and gas production to decline;
- costs associated with perfecting title for gas rights in some of our properties;
- we need to use unproven technologies to extract coalbed methane on some of our properties;
- location of a vast majority of our gas producing properties in three counties in southwestern Virginia, making us vulnerable to risks associated with having our gas production concentrated in one area;
- other persons could have ownership rights in our advanced gas extraction techniques which could force us to cease using those techniques or pay royalties;
- the coalbeds from which we produce methane gas frequently contain water that may hamper production; and
- other factors discussed in our 2006 Form 10-K under "Risk Factors," as updated by any subsequent Form 10-Qs, which are on file at the Securities and Exchange Commission.

BOARD OF DIRECTORS AND MANAGEMENT

J. BRETT HARVEY

JOHN WHITMIRE
