

International

Government and defense customers in 80 nations on every continent rely on Raytheon for state-of-the-art integrated mission systems. Our people and technology address some of the world's most compelling needs, ranging from missile defense in north Asia, to homeland security in the Middle East, command and control in Europe, and naval systems on the Pacific Rim. With our global companies in the United Kingdom and Australia, we can tailor our technology into unique mission systems to serve customers anywhere in the world. Raytheon is now

building on a legacy of world-class aviation and space systems to penetrate new market opportunities in India.

Overall, Raytheon's international customers constitute an important part of our total business. The relative stability of international defense outlays and the growing value of interoperability with U.S. and NATO systems are creating additional opportunities to extend Raytheon technology while contributing to a safer, more stable world.

Patriot Air and Missile Defense System

For people in many regions around the world, the word "Patriot" has become increasingly synonymous with "security." Raytheon's Patriot Air and Missile Defense System is in place on three continents to protect ground forces and civilians under threat of hostile attack from the

air. From Europe to the Middle East and Asia, governments are now turning to the most advanced Patriot configurations. Today, our nine international Patriot partners consist of The Netherlands, Germany, Greece, Spain, Israel, Saudi Arabia, Kuwait, Japan and Taiwan.

Successfully proven in combat during both Operation Desert Storm and Operation Iraqi Freedom, Patriot is a long-range, high-altitude, all-weather system designed to defeat advanced threats, including aircraft and cruise and tactical ballistic missiles.
