ZixIt and Xenos Announce Strategic Agreement

Companies to Offer Complete Legacy Document Transformation and Secure E-content Delivery Service

DALLAS – March 27, 2001 – ZixIt Corporation (Nasdaq: ZIXI), a premier provider of products and services that bring privacy, security, and convenience to Internet communications, today announced an agreement with Xenos (TSE: XNS), the data to e-content company™, a leading provider of software that allows companies to rapidly Web enable their customers' bills and statements. The combination of ZixIt and Xenos technologies provides a solution that will enable organizations of any size to transform and send customer documents from computer applications that were not originally designed for the Web quickly and securely via the Internet.

The Xenos d2e Platform™ converts existing data from legacy applications into electronic content (e-content) that ZixMail™ then compresses, encrypts, and delivers securely and easily via the Internet. ZixMail™ is a point-to-point security system for email that uses powerful encryption to keep legal documents, medical records, trade confirmations, and other sensitive communications secure and private while traversing the Internet and residing on email servers. Under the agreement, the companies will offer print stream capture and secure delivery of data and documents to existing and potential customers.

The Xenos d2e Platform transforms complex legacy data and documents into e-content formats, including XML, HTML, WML and PDF, allowing organizations to benefit from fast time to market and maximum return on investment. Xenos' blue-chip customers include American Express, Wells Fargo, Bank One, Charles Schwab, and ING ReliaStar.

– more –

Steve Gersten, ZixIt's senior vice president, sales and marketing, commented, "Xenos' d2e Platform is a proven, enabling technology used by some of the most respected corporations in America. We are pleased to enhance the value proposition of Xenos' document conversion technology by providing an alternative to capital intensive solutions for the secure delivery of electronic messages."

Glen Manchester, president and chief executive officer of Xenos, said, "This new agreement will enable our two companies to grow revenues by meeting the significant and increasing demand for the secure delivery of legacy data and documents through the Internet. Our joint solution enables companies to benefit from fast, cost-effective, and secure transformation and delivery of archived data and documents for e-business. This robust and highly scalable transformation and secure delivery solution takes output from print and data streams and delivers it securely over the Internet."

About Xenos

Xenos (TSE: XNS, www.xenos.com) is a world leader in providing software that transforms legacy data and documents into e-content for delivery on the Web. Xenos solutions are deployed by large "clicks and mortar" organizations in key industry segments, including banking and financial services, insurance, telecommunications, and utilities. The corporate headquarters of the company are located in Toronto, Canada, with U.S. headquarters in Dallas, Texas. Xenos' leading-edge software is used by alliance partners, such as IBM and iPlanet, to provide e-business solutions.

About ZixIt Corp.
