This document contains "forward-looking statements"—that is, statements related to future, not past, events. In this context, forward-looking statements often address our expected future business and financial performance, and often contain words such as "expects," "projects," "anticipates," "intends," "plans," "believes," "seeks," or "will." Forward-looking statements by their nature address matters that are, to different degrees, uncertain. For us, particular uncertainties arise from changes in the demand for our coal by the domestic electric generation industry; from legislation and regulations relating to the Clean Air Act and other environmental initiatives; from operational, geological, permit, labor and weather-related factors; from fluctuations in the amount of cash we generate from operations; and from numerous other matters of national, regional and global scale, including those of political, economic, business, competitive or regulatory nature. These uncertainties may cause our actual results to be materially different than those expressed in our forward-looking statements. We do not undertake to update our forward-looking statements, whether as a result of new information, future events or otherwise, except as may be required by law.

CEO's Letter

➔ In a word, 2014 was Transformational

Our wholly owned subsidiary, Sunrise Coal, was successful in purchasing Vectren Fuels, an acquisition that tripled the size of our company. Prior to the acquisition, Sunrise produced 3.3MM tons of coal annually. Today we have the ability to produce over 10MM tons annually, ranking Sunrise as the 4th largest coal producer in the Illinois Basin (ILB).

More importantly, our cost structure is lower than 75% of the ILB production, affording us an opportunity for profit and growth (see page 5). Below are some of the highlights of the transaction that occurred 8/29/2014:

		BEFORE	AFTER	CHANGE
Production Capacity	(MM tons annually)	3.3	>10	3X
Total Reserves	(MM tons)	193	265	37%
Active Reserve	(MM tons)	138	210	52%*
Bank Debt	(\$MM)	\$16MM	\$350**	

* War Eagle was an inactive reserve and became part of the active reserve of Oaktown II.

**At the closing of the Vectren Fuels transaction, Sunrise Bank Debt was \$350MM. As of 4/1/15, Bank Debt was \$291MM.

2014 – 4 th QUARTER RESULTS	
Cash from Operations	\$35MM
EBITDA	\$28MM* (\$111MM on annualized basis)
Net Income	\$ 9MM
Average Cost/Ton	\$29.61
Debt Repayment	\$39MM

* Excluding Savoy and one time Vectren Fuels charges.

In 2015 and beyond, we will focus on debt reduction and improving our transportation infrastructure. Historically, our company has been net debt free, and we are working to deleverage our balance sheet as quickly as possible. We have already paid down \$59MM of our bank debt to date, and plan to pay down debt further this year.

With the purchase of Vectren Fuels, we now own 265 million tons of some of the lowest cost production in the ILB. Our challenge will be to improve the accessibility of our coal to more markets. Improved transportation will lead to profit and growth.

More good things to come,

Brent K. Bilsland
President & CEO Hallador Energy Company

Growing Our Interests

Introducing the **Oaktown Mine Complex**

The acquisition of Vectren Fuels added the Oaktown Mine Complex to our Company. The Oaktown Complex consists of two underground mines (Oaktown I and Oaktown II) sharing a common surface facility with a capacity of 6.5 million tons of annual production.

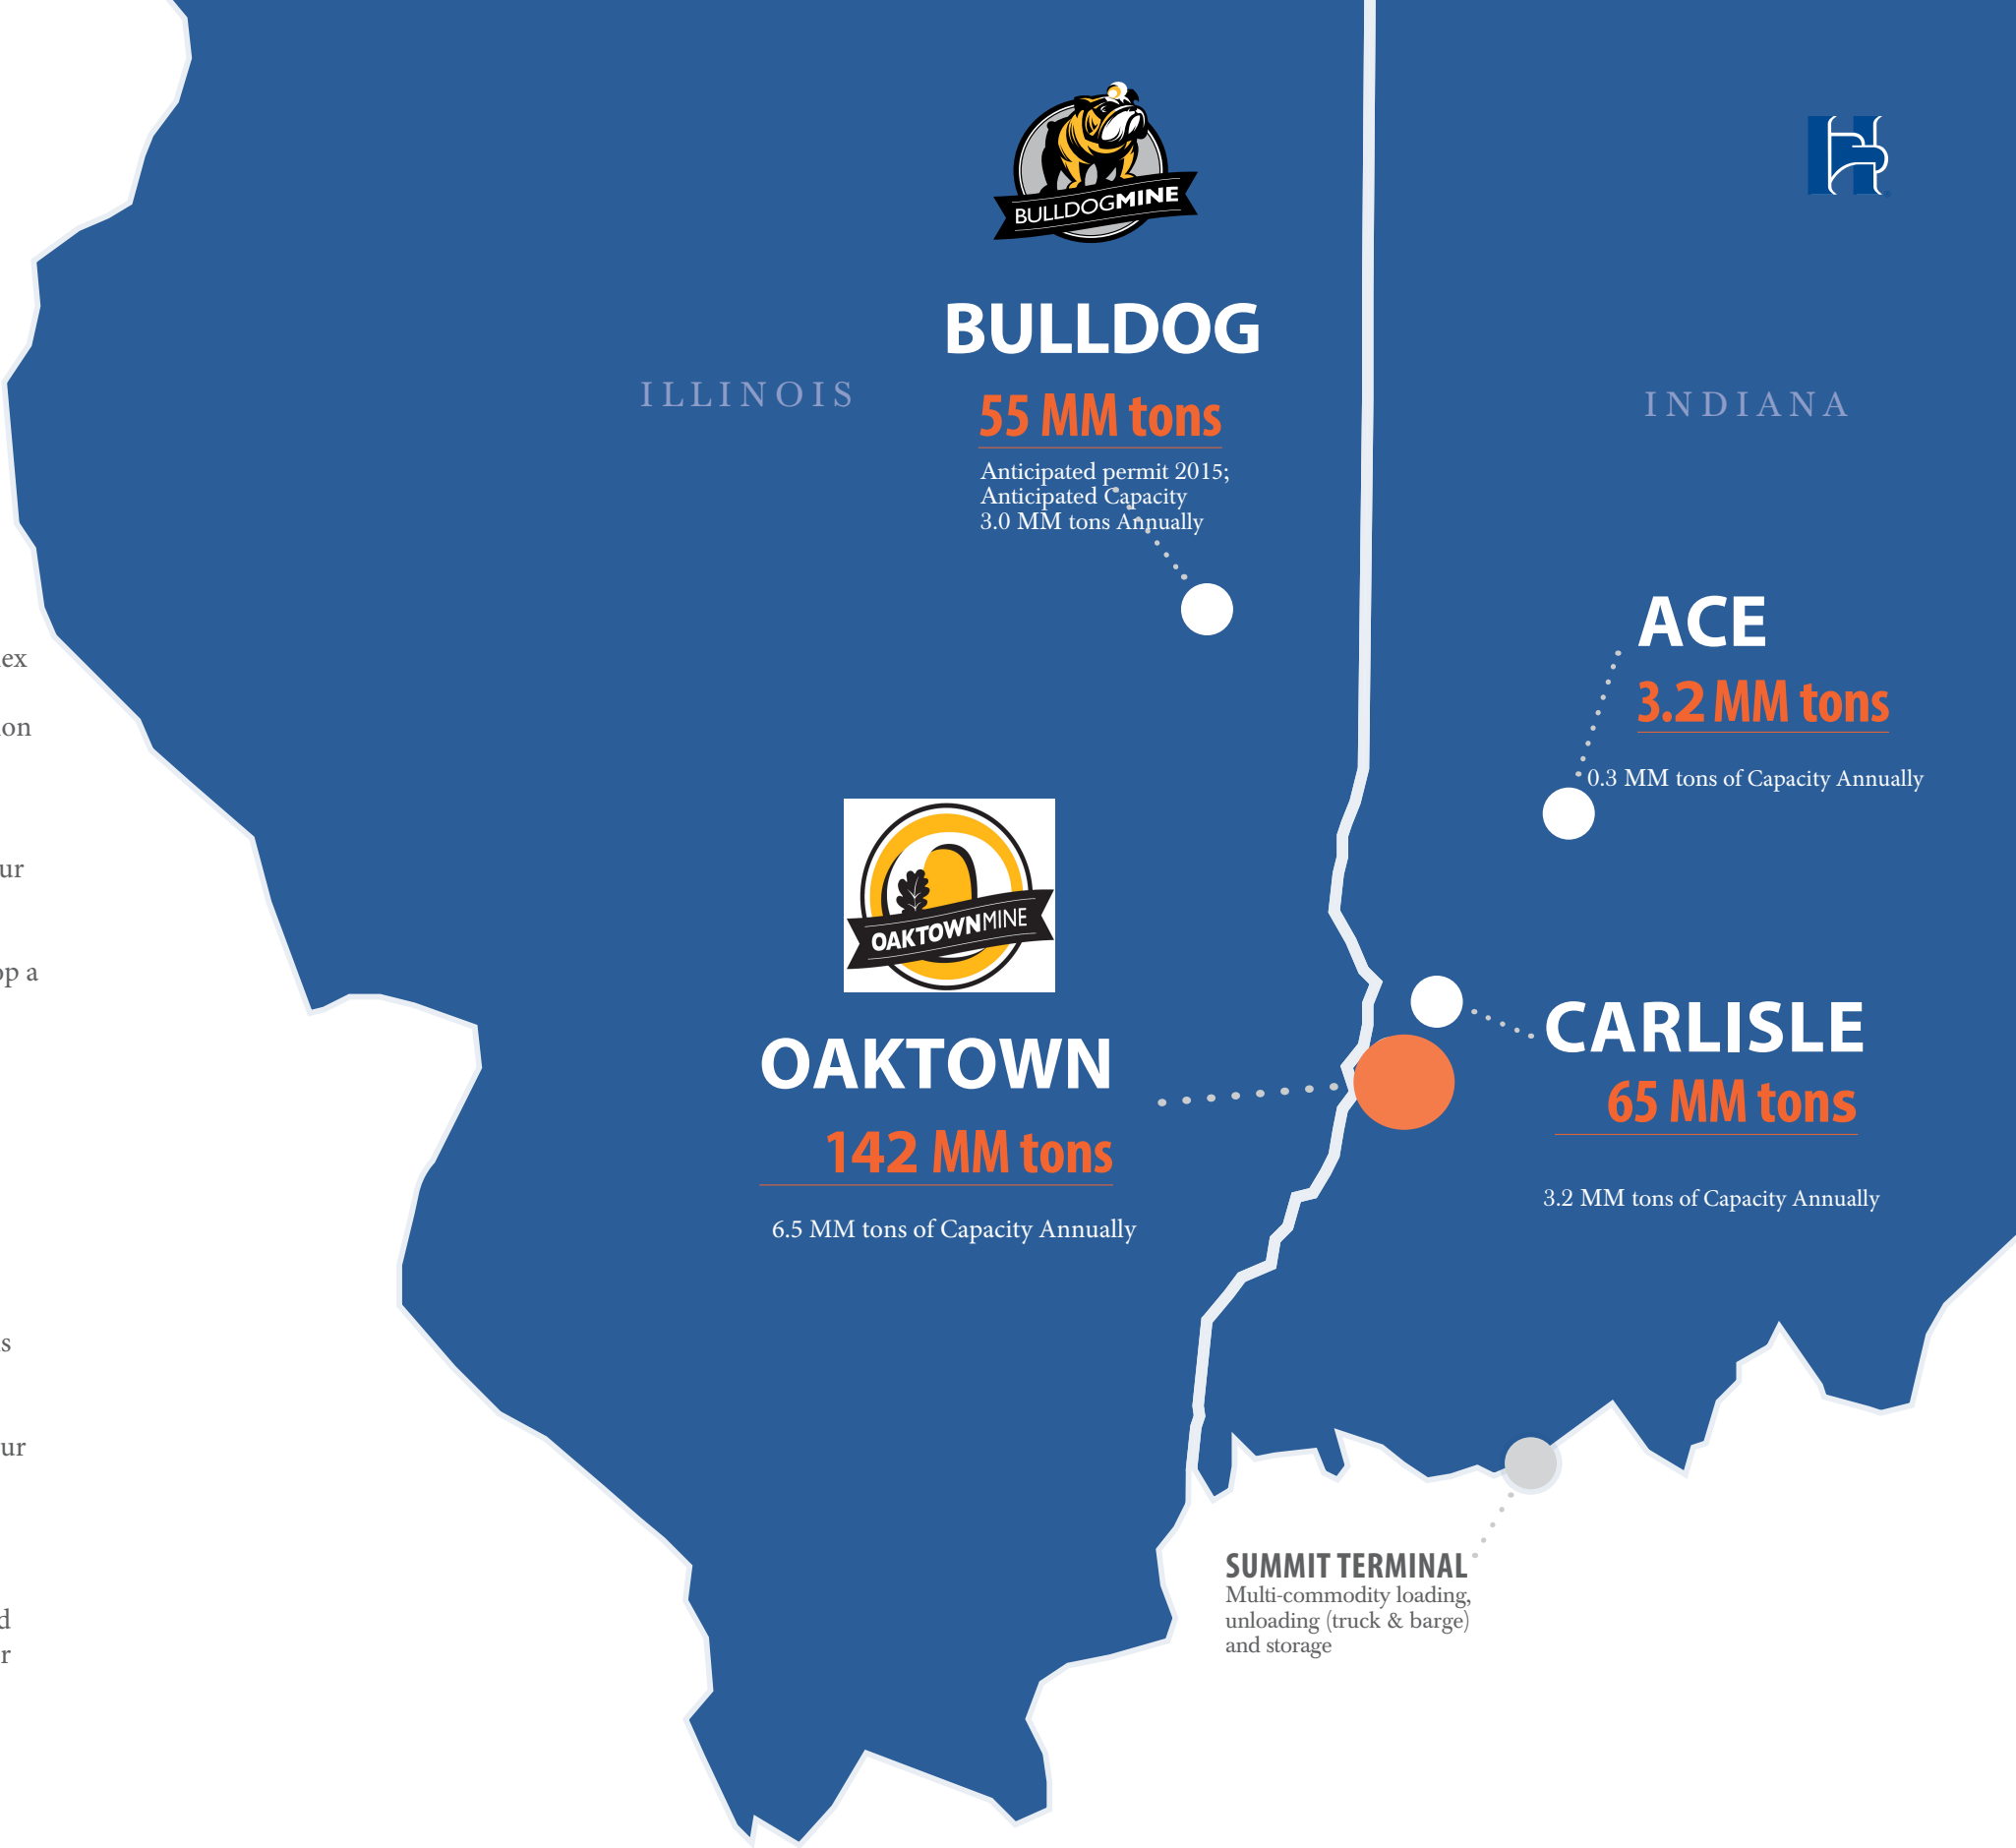

Oaktown II is contiguous to both our existing Carlisle Mine and our former War Eagle Reserve (now part of Oaktown II). Purchasing Vectren Fuels allows us to mine our War Eagle Reserve from the Oaktown II portal, without spending \$150MM necessary to develop a new mine.

Developing the **Bulldog Mine**

We have leased roughly 19,300 acres in Vermillion County, Illinois near the village of Allerton. Based on our reserve estimates we currently control 35.8 million tons of coal reserves and have identified a total of 55.1 million tons. A considerable amount of our leased acres has yet to receive any exploratory drilling, thus we anticipate our reserves to grow as we continue drilling.

Our permit to open the mine is close to being approved. We have completed our final public hearing and the public comment period has expired. We have received a permit modification request letter from the Illinois Depart of Natural Resources, thus we expect to receive an approved permit in 2015.

The Opportunity for Growth

→ We estimate that roughly **100 MM tons** of ILB production has a cost structure higher than ours.

As illustrated on the next page, 87 MM tons have a weighted average cost structure **19%** higher than ours.

As our transportation infrastructure improves, we will access more markets and our market share will grow.

Information compiled from Energy Ventures Analysis and other sources.

Sunrise Coal

→ Unique Quality Attributes

Low Chlorine
All of our mines are <.15 Chlorine.

Low Mercury
Our coal has 1/3rd the Mercury content of other Indiana coals.

Sulfur Flexibility

Mine	# of SO ₂
Oaktown I	6.00
Carlisle	5.25
Oaktown II	4.80
Ace in the Hole	1.50

Carlisle, Oaktown I & II, and Ace all have different sulfur content, yet all of our coal ships from the same CSX rate district. This enables us to give our customers the flexibility to blend multiple coals at either the Carlisle Mine or the Oaktown Complex at no additional freight cost.

Oaktown Complex | Oaktown, Indiana

Carlisle Mine | Carlisle, Indiana

Ace in the Hole Mine | Clay City, Indiana

Safety is Job One!

Education and Personal Responsibility Make Sunrise Coal a Leader in Safety

Training continues to be a top priority at Sunrise Coal. Sunrise miners are trained to take personal responsibility for **safety, compliance and production**.

Safety: Each miner takes personal responsibility for the safety of themselves and fellow coworkers; this is reflected in achieving an injury severity measure that is 77% better than national averages.

Compliance: Each miner takes personal responsibility to comply with federal and state laws; the Mine Safety and Health Administration (MSHA) logged over 1,200 inspection days at our operations during the last 15 months. Federal Mine Safety Inspectors from four different mining districts examined our operations throughout 2014. The violations per inspection day at Sunrise Coal is 65% less than the National Average.

Production: Each miner takes personal responsibility in production. Our miners are proud to produce a high quality, low cost product that supplies affordable electricity to power our economy.

Sunrise Coal continues to lead District 8 in many safety categories and rates consistently better than the national averages.

Based on monthly mine safety reporting 2014.

To learn more about the culture of safety at Sunrise Coal, visit: www.sunrisecoal.com/safety

“Sunrise Coal is a leader in technology, health and safety. If the law requires something, they try to go one step beyond what the law requires...”

Charles Jones, Retired MSHA Inspector

Summit Terminal

→ Multi-Commodity Trans Loading Facility

In 2013, Hallador Energy purchased a multi-commodity truck/barge terminal. Over 17 acres of open storage is available on site. The terminal is at mile point 743.8 on the Indiana bank of the Ohio River near the William Natcher Bridge between Rockport and Grandview, Indiana.

The dock will handle third party commodities. The long term plan will be to ship coal through the dock. The terminal is in close proximity to the NS railroad, the CSX railroad and American Electric Power’s Rockport generating power plant.

Savoy Energy Oil & Gas

Trenton-Black River Oil & Gas

Savoy operates almost exclusively in Michigan. They have an interest in the Trenton-Black River Play (TBR) in southern Michigan. They hold 136,000 gross acres (68,000 net) in this area.

During 2014, Savoy drilled 21 gross wells in the TBR of which 6 were dry, 12 were successful, and 3 are still being evaluated. Savoy operates their own wells and their working interest averages between 30-60% and their net revenue interest averages between 25-48%. Savoy’s net daily oil production currently averages 875 barrels. Savoy has interest in 112 gross wells (41 net). For 2015, Savoy will continue to drill wells but wait until oil prices rebound to complete them.

Our 45% ownership was decreased to 40% in 2014 due to the exercise of options by Savoy’s management.

Late in 2013, Savoy engaged Energy Spectrum Advisors Inc. to market its TBR oil properties located in southeast Michigan. No acceptable offers were received. Marketing efforts are on hold until oil prices recover.

NET OIL PRODUCTION Averages about 875 barrels daily

	Oil Production (Net daily avg. in barrels)	SEC PV10 (Proportionate to Hallador's ownership)
2014	875	\$34MM
2013	1,100	\$91MM
2012	910	\$35MM
2011	805	\$44MM
2010	655	\$15MM
2009	195	\$ 6MM
